# **Current Topics and Trends on Durability of Building Materials and Components**

Carles Serrat, Joan Ramon Casas and Vicente Gibert (Eds.)

# **Current Topics and Trends on Durability of Building Materials and Components**

Proceedings of the XV edition of the International Conference on Durability of Building Materials and Components (DBMC 2020) Barcelona, Spain 20 – 23 October 2020

Edited by

**Carles Serrat** Dept. of Mathematics

Joan Ramon Casas Dept. of Civil and Environmental Engineering

Vicente Gibert Dept. of Architectural Technology

Universitat Politècnica de Catalunya-BarcelonaTECH, Catalonia, Spain

A publication of: International Center for Numerical Methods in Engineering (CIMNE) Barcelona, Spain

# **Current Topics and Trends on Durability of Building Materials and Components**

Carles Serrat, Joan Ramon Casas and Vicente Gibert (Eds.)

First edition, October 2020

## **TABLE OF CONTENTS**

Preface	7
Acknowledgements	9
Organizers and Committees	11
Summary	17
Contents	19
Keynote	41
Special Sessions	51
Conference Topics Sessions	663
Authors Index	1949

## **ORGANIZING ASSOCIATIONS**

American Society for Testing and Materials (ASTM)

International Council for Research and Innovation in Building Construction (CIB)

International Union of Testing and Research Laboratories for Materials and Structures (RILEM)

National Institute of Standards and Technology (NIST)

National Research Council Canada (NRC-CNRC)

## **ORGANIZERS AND COMMITTEES**

## **ORGANIZING COMMITTEE**

#### **Carles Serrat i Piè**

Chair Department of Mathematics EPSEB, Barcelona, Spain

#### Joan Ramon Casas i Rius

Department of Civil and Environmental Engineering ETSECCPB, Barcelona, Spain

#### Vicente Gibert i Armengol

Department of Architectural Technology ETSAB, Barcelona, Spain

## **STEERING COMMITTEE**

#### **Organizing Members**

- Geert De Schutter, RILEM (Chair)
- Jennifer Keegan, ASTM
- Jorge De Brito, CIB
- Christopher C. White, NIST
- Michael Lacasse, NRC-CRC

#### **Members at Large**

- Robert Amor, The University of Auckland, New Zealand
- Carmen Andrade, CIMNE, Spain
- Christian Brischke, University of Göttingen, Germany
- Bruno Daniotti, Politecnico de Milano, Italy
- Vasco Peixoto De Freitas, FEUP, Portugal
- Peter Flüeler, m ETH/EMPA, Switzerland
- Dariusz Gawin, University of Lodz, Poland
- Julien Hans, CSTB, France
- Vanderley John, USP, Brazil
- Chun-Qing Li, RMIT University, Australia
- Isabel María Martínez, IETcc-CSIC, Spain
- Hiroyuki Miyauchi, BRI, Japan
- Shiro Nakajima, Utsunomiya University, Japan
- Carles Serrat, Universitat Politècnica de Catalunya-BarcelonaTECH, Spain
- Kiang Hwee Tan, NUS, Singapore
- Nil Turkeri, ITU, Turkey

## **UPC INSTITUTIONAL COMMITTEE**

- Francesc Torres (Chair), President of UPC-BarcelonaTECH
- Jordi Berenguer, Vice-rector for Knowledge Transfer and Innovation of UPC-BarcelonaTECH
- Inmaculada Rodríguez, Dean of Barcelona School of Building Construction (EPSEB)
- Pedro Díez, Dean of Barcelona School of Civil Engineering (ETSECCPB)
- Félix Solaguren-Beascoa, Dean of Barcelona School of Architecture (ETSAB)
- Albert Cuchi, Dean of Vallès School of Architecture (ETSAV)
- Eugenio Oñate, Chair of Executive Council of the International Center for Numerical Methods in Engineering (CIMNE)
- Carles Serrat, Chair of the DBMC 2020 Conference

## SCIENTIFIC COMMITTEE

#### Chairs

- Joan Ramon Casas (Co-Chair), UPC-Barcelona TECH, Spain
- Carmen Andrade (Co-Chair), CIMNE, Spain

#### Vice-Chairs

- Antonio Aguado, UPC-Barcelona TECH, Spain
- Túlio Bittencourt, University of São Paulo, Brazil
- Nele De Belie, University of Ghent, Belgium
- Ravindra Gettu, IIT Madras, India
- Rade Hajdin, IMC GmbH, Zürich & Belgrade Univ.
- Michael Lacasse, NRC Construction Research Centre, Canada
- Fernanda Rodrigues, Universidade de Aveiro, Portugal
- Elisabetta Rosina, Politecnico di Milano, Italy
- Ana Silva, IST, Lisbon, Portugal
- Alfred Strauss, BOKU, Vienna, Austria

#### Members

- Bijan Adl-Zarrabi, Chalmers University of Technology, Sweden
- Mark Ahrens, University Bochum, Germany
- Ahu Aydogan, City College of New York, USA
- Diana Bajare, Riga Technical University, Latvia
- Véronique Baroghel-Bouny, IFSTTAR, France
- Pablo Daniel Benítez-Mongelós, National University of Itapúa, Paraguay
- Umberto Berardi, Ryerson University, Canada
- Susan A. Bernal, University of Leeds, Leeds, UK
- Hans Beushausen, UCT, South-Africa
- Tomasz Blaszczynski, Poznan University of Technology, Poland
- Violeta Bokan-Bosiljkov, U. Ljubljana, Slovenia
- Mark Bomberg, Syracuse University, NY, USA
- Alessandra Bonazza, CNR, Italy
- Anatolijs Borodinecs, Riga Technical University, Latvia
- Lars Boström, SP, Sweden
- Kathryn Bourke, Whole Life Ltd, Watford, UK
- Thomas Braml, Bundeswehr University Munich, Germany
- Christian Brischke, University of Goettingen, Germany
- Zeynep Basaran Bundur, Özyegin University, Istanbul, Turkey
- Stefan Burtscher, TU Wien, burtscher consulting GmbH, Austria
- Guido Camata, University G. D'Annunzio, Chieti Pescara, Italy
- Jan Carmeliet, ETH Zürich, Switzerland
- Diana Car-Pušic, University of Rijeka, Croatia
- Robby Caspeele, University of Ghent, Belgium
- Anna Cellmer, Koszalin University of Technology, Poland
- Michael Chew, National University of Singapore, Singapore
- Sheila M.A. Conejos, School of Science and Technology, Singapore University of Social Sciences, Singapore
- Anca Constantin, Ovidius University of Constanta, Romania
- Bart Craeye, University of Antwerp, Belgium
- Paulo Cruz, University of Minho, Portugal
- Meri Cvetkovska, Ss. Cyril and Methodius University in Skopje, Republic of Macedonia
- Martin Cyr, INSA Toulouse, France
- Bruno Daniotti, Politecnico di Milano, Italy
- Jorge De Brito, Instituto Superior Tecnico, Technical University of Lisbon, Portugal
- Gianmarco De Felice, Università degli Studi Roma Tre, Italy
- Vasco Peixoto De Freitas, U. Porto, Portugal
- Dominique Derome, EMPA, Switzerland

- Josée Duchesne, Université Laval, Quebec, Canada
- Vilma Ducman, Slovenian National Building and Civil Engineering Institute, Slovenia
- Miren Etxeberria, UPC-BarcelonaTECH, Spain
- Flora Faleschini, Università degli Studi di Padova, Italy
- Ines Flores-Colen, Instituto Superior Técnico, University of Lisbon, Portugal
- David Garcia, UPC-BarcelonaTECH, Spain
- Dariusz Gawin, Lodz University of Technology, Poland
- Hua Ge, Concordia University, Montreal, Canada
- Jennifer Gerbi, U.S. Department of Energy, USA
- Michel Ghosn, City College New York, USA
- José Manuel Gómez Soberón, UPC-BarcelonaTECH, Spain
- Klodian Gradeci, SINTEF Building and Infrastructure, Trondheim, Norway
- Elke Gruyaert, KU Leuven, Belgium
- Lars Gullbrekken, SINTEF Building and Infrastructure, Trondheim, Norway
- Guillaume Habert, ETH Zürich, Switzerland
- Carl-Eric Hagentoft, Chalmers University of Technology, Sweden
- Tomáš Hanák, Brno University of Technology, Czech Republic
- Michael Hansen, TU Hannover, Germany
- Laia Haurie, UPC-BarcelonaTECH, Spain
- Shuichi Hokoi, Kyoto University, Japan
- Vít Hromádka, Brno University of Technology, Czech Republic
- Aletheia Ida, University of Arizona, USA
- Simo Ilomets, Tallinn University of Technology, Estonia
- Kei-Ichi Imamoto, Tokyo University of Science, Japan
- Joanna Janicka, University of Warmia and Mazury in Olsztyn, Poland
- Hans Janssen, KU Leuven, Belgium
- Pär Johansson, Chalmers University of Technology, Göteborg, Sweden
- Harald Justnes, SINTEF, Norway
- Targo Kalamees, Tallinn University of Technology, Estonia
- Mohammad Arif Kamal, Aligarh Muslim University, India
- Janis Kaminskis, Riga Technical University, Latvia
- Amnon Katz, Technion, Haifa, Israel
- Jacek Katzer, Koszalin University of Technology, Poland
- Miroslav Komljenovic, University of Belgrade, Serbia
- Kinga Korniejenko, Cracow University of Technology, Poland
- Jana Korytárová, Brno University of Technology, Czech Republic
- · Jarek Kurnitski, Tallinn University of Technology, Estonia
- Joao Labrincha, University of Aveiro, Portugal
- Roman Lackner, UIBK, Innsbruck, Austria
- Akos Lakatos, Universiy of Debrecen, Hungary
- Paulo Laurenço, University of Minho, Portugal
- Elizabeth Laycock, Sheffield Hallam University, UK
- Agnieszka Lesniak, Cracow University of Technology, Poland
- Mae-Ling Lokko, Rensselaer Polytechnic Institute, USA
- Barbara Lothenbach, EMPA, Duebendorf, Switzerland
- Zoubir Lounis, National Research Council Canada, Canada
- Lyuben Lyubenov, University of Structural Engineering & Architecture, Bulgaria
- Ana Mandic Ivankovic, University of Zagreb, Croatia
- Mihajlo Markovic, University of Banja Luka, Bosnia and Herzegovina
- Ivan Marovic, University of Rijeka, Croatia
- Isabel Milagre Martins, LNEC, Portugal
- Berardo Matalucci, SHoP Architects, USA
- Jose Matos, University of Minho, Portugal
- José António Raimundo Mendes da Silva, Universidade de Coimbra, Portugal
- Esperanza Menéndez Méndez, Institute of Construction Science Eduardo Torroja (CSIC), Spain
- José Filipe Miranda-Melo, University of Porto, Portugal
- Eva Møller, Technical University of Denmark

- Sergio Montelpare, University G. D'Annunzio, Chieti Pescara, Italy
- Travis Moore, National Research Council Canada, Ottawa, Canada
- Martin Morelli, Aalborg University, Copenhagen, Denmark
- Vahid Nik, Lund University, Sweden
- María Nogal, Delft University of Technology, the Netherlands
- Takafumi Noguchi, University of Tokyo, Japan
- Ehsan Noroozinejad, Graduate University of Advanced Technology, Iran
- Daniel Oliveira, University of Minho, Portugal
- Fernando Pacheco Torgal, University of Minho, Portugal
- Ainars Paeglitis, Riga Technical University, Latvia
- Cedric Patapy, Laboratoire Matériaux et Durabilité des Constructions INSA Toulouse/UPS, France
- Marco Perino, Politecnico di Torino, Italy
- Ruut Peuhkuri, Aalborg University, Copenhagen, Denmark
- Edyta Plebankiewicz, Cracow University of Technology, Poland
- Gul Polat, Istanbul Technical University, Turkey
- Ioana Popescu, IHE Delft Institute for Water Education, the Netherlands
- Andres J. Prieto, Universidad Austral de Chile, Valdivia, Chile
- John Provis, University of Sheffield, UK
- Elzbieta Radziszewska-Zielina, Cracow University of Technology, Poland
- Laura Rampazzi, University of Insubria, Italy
- Nuno Ramos, FEUP, University of Porto, Portugal
- Jacek Rapinski, University of Warmia and Mazury in Olsztyn, Poland
- Marzieh Riahinezhad, National Research Council Canada, Ottawa, Canada
- Pere Roca, UPC-BarcelonaTECH, Spain
- Hugo Rodrigues, Polytechnic of Leiria, Portugal
- Staf Roels, KU Leuven, Belgium
- Petra Rüther, SINTEF Building and Infrastructure, Trondheim, Norway
- Hiroaki Saito, Ashikaga University, Japan
- Antonio Sansonetti, CNR, Italy
- Amaia Santamaría, Universidad del País Vasco, Bilbao, Spain
- Mats Santamouris, University of Athens, Greece
- Karma Sawyer, U.S. Department of Energy, USA
- Erik Schlangen, TU Delft, the Netherlands
- Lina Seduikyte, Kaunas University of Technologies, Lithuania
- Dmitrijs Serdjuks, Riga Technical University, Latvia
- Igal M. Shohet, Ben-Gurion University of Negev, Israel
- Carey Simonson, University of Saskatchewan, Canada
- Gintautas Skripkiunas, Vilnius Gediminas Technical University, Lithuania
- Mohamed Sonebi, Queens University, Belfast, UK
- Wil Srubar, University of Colorado Boulder, USA
- Sudip Talukdar, British Columbia Institute of Technology, Burnaby, Canada
- Kiang Hwee Tan, National University of Singapore, Singapore
- Luping Tang, Chalmers University of Technology, Sweden
- Fitsum Tariku, British Columbia Institute of Technology, Burnaby, Canada
- Nicola Tarque, Pontificia Universidad Católica del Perú, Perú
- Akos Torok, Budapest University of Technology and Economics, Hungary
- Milan Trivunic, University of Novi Sad, Serbia
- Nil Türkeri, Istanbul Techn Univ, Turkey
- Maria Rosa Valluzzi, University of Padova, Italy
- Joris Van Acker, UGent, Belgium
- Keith Van de Riet, University of Kansas, USA
- Nathan Van Den Bossche, Ghent University, Belgium
- Philip Van Den Heede, Ghent University, Belgium
- Humberto Varum, University of Porto, Porto, Portugal
- Marius Vendrell, University of Barcelona, Spain
- Anne Ventura, IFSTTAR, France
- Yury Villagran, LEMIT, La Plata, Argentina

- Martins Vilnitis, Riga Technical University, Latvia
- Eva Vitkova, Brno Univeristy of Technology, Czech Republic
- Jeroen Vrijders, Belgian Building Research Institute, Belgium
- Johan Vyncke, Belgian Building Research Institute, Belgium
- Lin Wang, Concordia University, Montreal, Canada
- John A. Wells, Crosier Kilgour and Partners Ltd., Winnipeg, Canada
- Guang Ye, TU Delft, the Netherlands
- Joan Lluís Zamora, UPC-BarcelonaTECH, Spain
- Mariano Angelo Zanini, Università degli Studi di Padova, Italy
- Cristina Zanotti, University of British Columbia, Canada
- John Zhai, University of Colorado Boulder, USA
- Xiaohai Zhou, EMPA, Switzerland
- Valentina Žileska-Pancovska, Ss. Cyril and Methodius University in Skopje, Republic of Macedonia

#### LOCAL ORGANIZING COMMITTEE

#### Chairs

• Vicente Gibert, UPC-BarcelonaTECH, Spain

#### Members

- Cindy Abbott-Brito
- Ronny S. Guarderas-Luna
- Laia Haurie, EPSEB
- Beatriz D. Médola
- Climent Molins, ETSECCPB
- Joan Moreno, ETSAV
- Ana-Belén Onecha, ETSAB
- Javier E. Peñuelas
- Verónica Royano
- Alejandra Valencia-Arboleda

## SUMMARY

## **KEYNOTE**

10te

## **SPECIAL SESSIONS**

Approaches to Hygrothermal Simulation for Assessing DurabilityRelated to Climate Change
Organized by Travis Moore (NRC, Canada) and Michael Lacasse (NRC, Canada)
Biomimetic and Bioinspired Approaches for Enhanced Durability of Cementitious Materials
Organized by Wil Srubar (University of Colorado Boulder, USA ) and Zeynep Basaran Bundur (Özyegin University, Istanbul, Turkey)
Degradation of Coating Materials and its Relation to Durability of Structures145
Organized by Takafumi Noguchi (University of Tokyo, Japan) and Kei-ichi Imamoto (Tokyo University of Science, Japan)
Durability and Field Tests of Thermal Insulating and Innovative Constructive Solutions
Organized by Ines Flores-Colen (IST, University of Lisbon, Portugal) and Nuno Ramos (FEUP, University of Porto, Portugal)
Durability and Performance of Building Envelopes
Organized by Klodian Gradeci (SINTEF Building and Infrastructure, Trondheim, Norway) and Petra Rüther (SINTEF Building and Infrastructure, Trondheim, Norway)
Durability Considering Climate Change and Natural Hazards
Organized by Michael Lacasse (NRC, Canada) and Travis Moore (NRC, Canada)
Environmental Factors and Durability
Organized by Tomasz Blaszczynski (Poznan University of Technology, Poland)
Life Cycle Costs in Construction Projects
Organized by Vít Hromádka (Brno University of Technology, Czech Republic) and Edyta Plebankiewicz (Cracow University of Technology, Poland)
Modern Sustainable Building Materials and Technologies
Organized by Elzbieta Radziszewska-Zielina (Cracow University of Technology, Poland)
Performance Over Time of High-Performance Insulation and Reflective Building Envelope Materials

Organized by Umberto Berardi (Ryerson University, Canada) and Marco Perino (Politecnico of Turin, Italy)

Remote Sensing of Building Condition	
Organized by Joanna Janicka (University of Warmia and Mazuri in Olsztyn, Poland) and Jacek Rapinski (University of Warmia and Mazuri in Olsztyn, Poland)	
Slags in Cement-based Materials	567
Organized by Flora Faleschini (Università degli Studi di Padova, Italy) and Amaia Santamaria (Universidad del País Vasco, Bilbao, Spain)	

### Soft Computing Tools and Sustainable Building Construction and Maintenance......615

Organized by Diana Car-Pušic (University of Rijeka, Croatia) and Ivan Marovic (University of Rijeka, Croatia)

## **CONFERENCE TOPIC SESSIONS**

Asset and Maintenance Management
Organized by Ana Silva (IST, Lisbon, Portugal)
Building Pathology and Durability771
Organized by Túlio Bittencourt (University of São Paulo, Brazil)
Building Physics and Durability
Organized by Antonio Aguado (UPC-BarcelonaTECH, Spain)
Durability Approach for Historical and Old Buildings 1149
Organized by Elisabetta Rosina (Politecnico di Milano, Italy)
Durability of Materials, Systems and Components 1227
Organized by Ravindra Gettu (IIT Madras, India)
IT / BIM and Durability 1665
Organized by Rade Hajdin (IMC GmbH, Zürich & Belgrade Univ)
Large Sample Size Studies in Durability 1719
Organized by Fernanda Rodrigues (Universidade de Aveiro, Portugal)
LCA, Sustainability and Durable Construction 1767
Organized by Nele De Belie (University of Ghent, Belgium)
Service Life Prediction Methodologies 1869
Organized by Alfred Strauss (BOKU, Vienna, Austria)

## **CONTENTS**

## **KEYNOTE**

Prescription of Maintenance Interventions by the New Generation of
Eurocodes for Climate-Change Resilient Structures
Maria Nogal

## **SPECIAL SESSIONS**

## Approaches to Hygrothermal Simulation for Assessing Durability Related to Climate Change

Organized by Travis Moore (NRC, Canada) and Michael Lacasse (NRC, Canada)

A Methodology for Assessment of Building Assembly Air Leakage
Moisture Response, Condensation Risk, and Expected Durability When
Subjected to Projected Future Climate Loads
David G. Kayll, Maurice Defo, Travis Moore and Michael A. Lacasse
Effect of Selected Moisture Reference Year on the Durability Assessment of Wall Assemblies under Future Climates
Sahar Sahyoun, Hua Ge, Chetan Aggarwal, Maurice Defo and Travis Moore
Freeze-Thaw Risk in Solid Masonry: Are 'Hygrothermal Response Based' Analyses Mandatory when Studying the Sensitivity of Building Envelopes to Climate Change?
Isabeau Vandemeulebroucke, Steven Caluwaerts and Nathan Van Den Bossche
Impact of Climate Change in Building Envelope Design: The Performance to Withstand Mould Growth
Klodian Gradeci, Alessandro Nocente, Nathalie Labonnote and Petra Rüther
The Future Climate Moisture Susceptibility of Wall Assemblies: Analysis Based on Monte Carlo Simulation Using a Simplified Deterministic Hygrothermal Simulation Model
Carl-Eric Hagentoft and Pär Johansson
Validation of Three Methods of Selecting Moisture Reference Years for Hygrothermal Simulations
Chetan Aggarwal, Maurice Defo, Travis Moore, Michael A. Lacasse, Sahar Sahyoun and Hua Ge
Biomimetic and Bioinspired Approaches for Enhanced Durability of Cementitious Materials
Organized by Wil Srubar (University of Colorado Boulder, USA ) and Zeynep Basaran Bundur (Özyegin University, Istanbul, Turkey)

Biodegradable Polymers on Cementitious Materials	)
Julia García-González, Paulo C. Lemos, Alice S. Pereira, Julia Mª. Morán-del Pozo,	
M. Ignacio Guerra-Romero, Andrés Juan-Valdés and Paulina Faria	

Biomimetic Antifreeze Polymers: A Natural Solution to Freeze-Thaw
Damage in Cement and Concrete
Mohammad Matar, Shane Frazier and Wil V. Srubar III
Compressive Strength Improvement and Water Permeability of
Self-Healing Concrete Using Bacillus Subtilis Natto
Nguyen Ngoc Tri Huynh, Kei-ichi Imamoto and Chizuru Kiyohara
Implication of Microbial Biofilm in the Biodeterioration of Cementitious
Materials in the specific context of Anaerobic Digestion Conditions121
Cédric Perez, Christine Lors and Benjamin Erable
Integrating Self-Sensing in Self-Healing Concrete: Towards a Biomimetic
Approach to Repair
Kevin Paine, Bianca Reeksting, Hussameldin Taha and Susanne Gebhard
<b>Two-Part Bio-Based Self-Healing Repair Agent for Cement-Based Mortar</b> 137 Mustafa Mert Tezer and Zeynep Başaran Bundur
Degradation of Coating Materials and its Delation
to Durability of Structures
Organized by Takafumi Noguchi (University of Tobyo Japan)
and Kei-ichi Imamoto (Tokyo University of Science, Japan)
Analysis of Change of Physical Properties of Organic Repair Products
due to Fire Exposition145
Esperanza Menéndez, Kei-ichi Imamoto, Ravindra Gettu, Takafumi Noguchi and Hairon Recino
Comparative Life-Cycle Analysis of Two Repair Measures for Chloride
<b>Contaminated Concrete Structures</b>
Deterious tion Des disting Medel of Medti Leaves Continue Meterial and its
Deterioration Frediction Model of Multi-Layer Coating Material and its Reference Service Life Evaluation in Terms of Carbonation Control Effect 161
Kotaro Etchuya, Kei-ichi Imamoto and Chizuru Kiyohara
Effects of Finishing Materials against Carbonation and Corrosion Condition of Model Building Exposed to Outdoor Conditions for 30 Years
Koichi Matsuzawa Osamu Senbu Kei-ichi Imamoto Chizuru Kivohara Kotaro Etchuva
and Kaori Nemoto
Morphology Changes and Fillers migration in Urethane Composites during
Thermal Degradation177
Atsuki Tanifuji, Takato Ishida and Ryoma Kitagaki
Study on a Proper Repair Cycle of Finishing Materials in Condominiums
Tomotaka Ide, Hitoshi Hamasaki and Yuki Soga

## Durability and Field Tests of Thermal Insulating and Innovative Constructive Solutions

Organized by Ines Flores-Colen (IST, University of Lisbon, Portugal) and Nuno Ramos (FEUP, University of Porto, Portugal)
<b>Assessing Water Resistance and Surface Properties of ETICS</b>
<b>Development of an Integrated Durability Assessment Methodology</b> <b>of Thermal Mortars Applied in Multi-layer Systems</b> 201 Joana Maia, Nuno M.M. Ramos and Rosário Veiga
<b>Evaluation of ETICS Characteristics that Affect Surface Mould Development</b> 209 João L. Parracha, Armand Cortay , Giovanni Borsoi, Rosário Veiga and Lina Nunes
<b>In-Situ Tests on Silica Aerogel-Based Rendering Walls</b>
<b>Laboratory Vs Field Performance of Innovative Thermal Insulating Plasters</b>
Large Scale Laboratory and Field Tests of Aerogel Renders
Durability and Performance of Building Envelopes
Organized by Klodian Gradeci (SINTEF Building and Infrastructure, Trondheim, Norway) and Petra Rüther (SINTEF Building and Infrastructure, Trondheim, Norway)
<b>Bio-Based Building Materials-How to Unravel the Role of Material</b> <b>Characteristics on Fungal Susceptibility?</b>
Implementing a Framework for Qualitative Assessment of New Technical Solutions:A Case Study on CLT
Influence of Grid Presence in the Characteristics of Applied Mortars255 Isabel Torres, Inês F. Colen, Dora Silveira and Rafael T. Pinto
Influence of Lightweight Concrete Block Support on Physical and Mechanical Characteristics of Applied Mortars263
Dora Silveira, Isabel Torres, Inês F. Colen and Rafael T. Pinto
Performance and Durability of Adhesive Tapes for Building Applications.

Predominant Climate Exposure Strains - Thermal Degradation Testing
Compared to Historical and Future Climate Scenarios
Petra Rüther, Klodian Gradeci and Malin Sletnes
Durability Considering Climate Change and Natural Hazards
Organized by Michael Lacasse (NRC, Canada) and Travis Moore (NRC, Canada)
Assessment of Moisture Performance of National Building Code Canada Compliant Wall Assemblies under Climate Change
Max Junginger, Maurice Defo, Travis Moore, Michael A. Lacasse and Vanderley M. John
Assessment of Moisture Response and Expected Durability of a Heritage Masonry Building Subjected to Projected Future Climate Loads of Ottawa, Canada
<b>Do We Need Hygrothermal Simulations to Evaluate the Design for Durability?</b>
<b>Hygrothermal Performance Difference of Wooden Beam Embedded</b> <b>in an Internally Insulated Masonry Wall in 2D and 3D Models</b>
<b>Preventing Damage by Updating Moisture Control Standards</b>
The Impact of Climate Change on Material Degradation: Finding a FeasibleApproach for Climate Model Evaluation
Various Factors of Water Entry and Penetration Through Water Proofing Layer in Wooden Wall Assembly
<b>Environmental Factors and Durability</b>
Organized by Tomasz Blaszczynski (Poznan University of Technology, Poland)
A Probabilistic Model for the Evolution of Porous Structure Caused by Solid-Phase Precipitation/Dissolution within Building Materials
Assessment of Reasons behind and Level of Destruction of Aquatic Supports in a Hydraulic Ash Removal Bridge
Grain size analysis of class C fly ash used for aluminium-silicate
binders production
Iomasz Biaszczynski and Maciej Krol
<b>Hygrothermal Regulation of Brick Masonry of Nanjing City Wall by Plants</b>

<b>Numerical Strategy to Simulate Seawater Ingress in RC Concrete Blocks</b> <b>Exposed to Wetting-Drying Cycles in Field Conditions During 19 years</b>
<b>The Influence of Injection Agents Applied for Carrying out Secondary</b> <b>Horizontal Damp Proof Courses on Masonry Mortar Properties</b>
Life Cycle Costs in Construction Projects
Organized by Vít Hromádka (Brno University of Technology, Czech Republic) and Edyta Plebankiewicz (Cracow University of Technology, Poland)
<b>Client's Expectations vs Contractor's Pricing. Fair Prices or Bid Rigging</b>
<b>Evaluation of Economic Efficiency of Territory Development</b>
<b>Evaluation of Socio-economic Impacts of Incidents on the Railway Infrastructure</b> 407 Vít Hromádka, Jana Korytárová, Eva Vítková, Tomáš Funk and Herber Seelmann
Identifying the Possibility of Using Unmanned Aerial Vehicles in the Process of Construction Projects Implementation
Multiple-Criteria Cost Analysis for Simulated Life Cycle of Office Building
<b>Possibilities of Reducing Energy Costs in the Life Cycle of Office Buildings</b>
Modern Sustainable Building Materials and Technologies
Organized by Elzbieta Radziszewska-Zielina (Cracow University of Technology, Poland)
Application of Pro-Ecological Building Technologies in Contemporary Architecture
Jerzy Górski, Joanna Klimowicz and Anna Nowak
<b>Fire Properties of Novel Cellulosic Material Modified with Expandable Graphite</b> 443 Anielkis S.R. Batista, Wojciech Ł. Grześkowiak and Bartłomiej Mazela
Fundamental Properties and Durability of Concrete with Gasification Molten Slag as Fine Aggregate
Takafumi Watanabe, Hiromi Fujiwara, Masanori Maruoka and Koji Satori
<b>Performance Based Specification of Wood - Project CLICKdesign</b>

Permeability of Ultra-Fine Reactive Fly Ash applied to
Wei-Ting Lin, An Cheng, Wei-Chung Yeih, Kinga Korniejenko, Marek Hebda and Michał Łach
Solooting Cuitorio for Assossing "Environmentally Eriondly" Material
Options in Construction: Part I
Robert Bucoń and Agata Czarnigowska
Selecting Criteria for Assessing "Environmentally-Friendly" Material Options in Construction: Part II
Robert Bucoń and Agata Czarnigowska
Performance Over Time of High-Performance Insulation and Reflective Building Envelope Materials
Organized by Umberto Berardi (Ryerson University, Canada) and Marco Perino (Politecnico of Turin, Italy)
Effects of Long-Term UV Exposure on the Performance of Cement Plasters Integrated with Thermochromic Paint and PCMs for Building Facade Applications
Shahrzad Soudian, Umberto Berardi and Nadia O. Laschuk
<b>Experiences from Interior Super Insulation of a Brick Wall from the 1800s</b>
<b>Experimental Verification of the Theoretical Aging of Vacuum Insulated Panels</b> 505 Mahsa Nikafkar and Umberto Berardi
Failure Analysis of a Total Damage by Hail Impact of an External Thermal Insulation Composite Systems
Silvain Michel, Peter Flüeler, Martin Jordi and Roger Welter
Quantifying Thermal Performance of the Building Envelope - Beyond
Simon Pallin, Jason W. DeGraw, Mahabir Bhandari and Tyler Pilet
<b>Remote Sensing of Building Condition</b>
Organized by Joanna Janicka (University of Warmia and Mazuri in Olsztyn, Poland) and Jacek Rapinski (University of Warmia and Mazuri in Olsztyn, Poland)
A 3D Model for Building Condition Assessment
Anna Banaszek, Sebast Banaszek, Anna Cellmer, Vicenç Gibert and Carles Serrat
Identification of Defects and Hazards in Structures Based on the Point Cloud Using the OptD Method
Wioleta Błaszczak-Bąk and Joanna Janicka
Mobile Augmented Reality Application Supporting Building Facades Visualization
Michal Bednarczyk and Tomasz Templin

Out-Of-Plane Displacements Determination Based on the Analysis of Point
Joanna Janicka, Jacek Rapiński, Wioleta Błaszczak-Bąk and Czeslaw Suchocki
Verification of Building Constructions Surroundings Based on Airborne
Laser Scanning Data
Slags in Cement-based Materials
Organized by Flora Faleschini (Università degli Studi di Padova, Italy) and Amaia Santamaria (Universidad del País Vasco, Bilbao, Spain)
Durability in Marine Environment of High-performance Concrete
with Electric arc Furnace Slags and Cupola Slag Admixture
Israel Sosa, Carlos Thomas, Juan Antonio Polanco, Jesús Setién and Pablo Tamayo
Durability Studies of Self-Compacting Concrete containing Electric ArcEurnace Slag Aggregate 57
Amaia Santamaria, Marta Skaf, Vanesa Ortega-Lopez, Estiba Briz, José T. San José and Javier J. González
Durability Studies on Fiber-Reinforced Siderurgic Concrete
Vanesa Ortega-López, Víctor Revilla-Cuesta, Amaia Santamaria, Ana B. Espinosa, José A. Fuente-Alonso and José A. Chica
Mechanical and Environmental Behavior of Cement Mortars Containing Ladle Furnace Slag
Diego Aponte and Marilda Barra
Pore Refinement Action of GGBFS and Fly Ash on the Primary and Secondary Capillary Imbibition Rates of Concrete
Natalia M. Alderete, Yury A. Villagrán-Zaccardi and Nele De Belie
Seismic Performance of RC Moment Frame Structures Made with EAF
Slag Aggregates
Soft Computing Tools and Sustainable Building Construction and Maintenance
Organized by Diana Car-Pušic (University of Rijeka, Croatia) and Ivan Marovic (University of Rijeka, Croatia)
Application of Soft Computing Methods to Increase Sustainability in Construction
Silvana V. Petruseva and Valentina K. Zileska Pancovska
Decision Sunnort to Identification of Road Infrastructure Segments
With Poor Conditions

<b>Early Stage Construction Cost Prediction in Function of Project Sustainability</b> 631 Diana Car-Pusić and Marko Mladen
<b>Possible Applications of Neural Networks in Managing Urban Road Networks</b>
<b>Uncertainty and Sensitivity Analyses for Evaluating the Building</b> <b>Element's Replacement in Building LCA</b>
<b>Use of Machine Learning in the Function of Sustainability of Wastewater</b> <b>Treatment Plants</b>
<b>CONFERENCE TOPIC SESSIONS</b>
Asset and Maintenance Management
Organized by Ana Silva (IST, Lisbon, Portugal)
A Comprehensive Description of a Low-Cost Wireless Dynamic Real-Time Data Acquisition and Monitoring System
<b>A Framework for Installation Impact Analysis on Building Performance</b>
<b>A Maintenance Management Model. Upgrading and Experimentation</b>
<b>A Vector Scale of Severity of Damages in Buildings</b>
Assessing the Condition of Reinforced Concrete Bridge Using Visual Inspection Ratings
<b>Condition-Based Maintenance Models for Stone Claddings</b>
<b>Detection Sensitivity of Iron-Foil Corrosion Sensor in Simulated</b> <b>Concrete Solution</b>
<b>Development of an Apparatus for Measuring the Load Acting</b> <b>on Joint Sealant when Movement Occurs</b>
<b>Financial Management of Construction Companies</b>

Neural Model of Projecting Compressive Strength of Cement Concrete
Małgorzata Linek
<b>Platform Development for Drone Utilization in the Architectural Field</b> 739 <i>Hiroyuki Miyauchi</i>
Sustainability and Maintainability of High Rise Vertical Greenery Systems (VGS): its Lessons and Assessment Scoresheet
Shella Conejos and Michael I.L. Chew
<b>Synthetic Resin Reinforcement of Timber Joints Deteriorated by Termites</b> 755 Mikako Yamada, Masamitsu Sawada, Kei-ichi Imamoto, Chizuru Kiyohara and Akiko Ohtsuka
Use of Steel Fiber Reinforced Concrete for the Protection of Buildings
Against High Dynamic Actions 763   Vahan Zohrabyan, Thomas Braml, Tobias Zircher and Manfred Keuser
<b>Building Pathology and Durability</b>
Organized by Túlio Bittencourt (University of São Paulo, Brazil)
Airborne Algal Growth on the Roofs of Membrane-Structured Residences in a Cold Areas of Japan
<b>Analysis of the Degradation Condition of Elementary Schools</b>
<b>Comparative Study on (Non-)Destructive Techniques for On-Site Strength</b> <b>and Durability Assessment of Limestone Based Concrete Slabs</b>
Concrete Durability Probed Using Compressive Strength, Chloride Penetration and Porosity Measurements on CEMII and CEMV Concretes Incorporating Molluse Shell Spares in Artificial and Natural Segmeters
Marine D. Georges, Amel. Bourguiba, Nassim. Sebaibi, Daniel. Chateigner and Mohamed. Boutouil
Development of a Damage Detecting Method for RC Slabs by Means of Machine Learning
Yutaka Tanaka and Takahiro Nishida
Dynamic Observability Method for Durability Assessment Considering Measurement Noise
Tian Peng, Joan R. Casas and Jose Turmo
Field Survey of Hygrothermal Behaviour within Wall Assembly Derived from Rain Penetration and Ventilation Performance of Exterior System

Sadaharu Osamura and Hiroaki Saito

<sup>3</sup> University of Naples Federico II, Department of Civil, Architectural and Environmental Engineering, Piazzale Vincenzo Tecchio, 80, 80125 Naples, Italy, alessio pino@hotmail.it

Abstract. The performance decay of a building component is influenced by a huge variety of parameters, interacting between them and determining different results in terms of service life and performance over time. For this reason, evaluating and modeling the performance of a component requires the comprehension of the way and the measure the single factors affect it, and turning this into an analytical model is a very complex operation. Moreover, components of existing buildings are subjected to an additional incognita: the characteristics and the durability of the materials, which is hardly a certain information, and can vary between similar buildings, affecting the accuracy of the evaluation. This study, conducted according to the guidelines of ISO 15686:7 code, investigates on a common solution for interventions on existing buildings, the ETICS, surveying their current performance degree through thermographic camera tests. The aim is to appreciate the difference in the performance decay between different facades of the same building – a homogeneity that allows to estimate this parameter alone - in order to reach an analytical expression of the variation of performance decay according to the difference in the exposure. The sample is constituted by buildings of large dimensions and well-known original projects and details of successive interventions, located in the city of Naples. The data obtained with in-field measurements were subjected to statistical analysis, to allow the quantitative determination of the impact of this parameter.

Keywords: Durability, ETICS, in-field Measurement.

## 1 Introduction and State of the Art

In the last decades, together with the acknowledgement of the necessity to plan the maintenance of a building in advance, an increasingly higher importance has been given to the role of the comprehension of the dynamics of performance decay of building materials and components. In fact, knowing the trends and the times of performance decay is a required item, in order to predict the performance levels that will be reached through time, according to which maintenance interventions can be chosen.

Since diseconomies in terms of maintenance choices evidently lead to a waste of resources, the consequences of a scarce knowledge about the performance decay of components rapidly produce effects on the aspects of sustainability and energy consumption, which is a critical topic in the current situation of the construction industry. Despite that, accomplishing a high level of detail in the understanding of the processes that determine the performance decay of building components is definitely not an easy task. On one hand there are the intrinsic

characteristics of the materials, which can also be determined through laboratory tests which simulate the passing of time (i.e. accelerated aging tests), but on the other hand the actual inuse condition of building components has several possible variations: the micro-context, and macro-context of the building, the compatibility with other components, and many more. This evidence is also embodied in the structure of the Factor Method, which attributes a separate weight for the external and internal environment.

It seemed interesting to refer to a specific component for which the environmental impact of the maintenance activity has been emphasized (Minarovičová, 2015), that is used to produce benefits in terms of durability of the system, and improvement of thermal – so, energy – performance: the ETICS or External Thermal Insulation Composite Systems.

They consist in an insulation board bonded onto a new or existing masonry or concrete wall, and mechanically fixed with anchors. The insulation board is then protected by a base coat, usually 3-4 mm thick, made of the cement mortar with resin used as adhesive, but reinforced with a glass fibre mesh. Onto the base coat a 'key coat', or primer, is applied, and then the finishing, which is usually a thick (1.5-2 mm) top coat. This technology is very common all over Europe, thanks to its low cost and the possibility it offers to accomplish a very good improvement of the thermal properties of the building envelope.

The research investigates the variation of the trend of its performance decay according to the environmental exposure, and in particular the cardinal exposure: considering that very often it is applied on the whole surface of buildings, then the differences in the behavior of the ETICS on the single façades are an interesting item.

This kind of solution is defined in UNI/TR 11715 code, "Thermal insulation products for buildings - Design and in-situ installation of External thermal insulation composite systems with renders (ETICS)", and its aspects related to durability have attracted a strong interest, in the field of research. The most part of the experimentations has focused on laboratory tests, making use of climatic chambers by simulating the aging process through specific cycles, among which the first attempts were performed by Daniotti and Paolini (2005), who realized qualitative comparisons between the durability of different solutions of ETICS, without developing re-scaling factors to relate it to natural time. In the same year, Bochen *et al.*, (2005) performed other climatic chamber tests, also determining the equivalence to natural aging. Years later, Griciuté *et al.*, (2013) made more experimentations involving the accelerated ageing of ETICS.

Other researchers investigated specific aspects of the durability of ETICS, among which Topcu and Merkel (2008), who focused on the moisture absorption, Künzel and Zirkelbach (2008), who studied the influence of rain water leakage on the hygrothermal performance of ETICS. There has been, in general, a much higher number of laboratory experimentations than field tests, including computational and theoretical modelling of the durability of this solution, such as the computational analysis performed by Koči *et al.*, (2012) and the multiphysics modelling by Daniotti *et al.*, (2014). On the other hand, there has been a much lower, and more recent, number of field researches on the durability of ETICS, realized by De Freitas (2016) and Kvande (2018). In these and other cases, little use of the thermographic camera has been noticed.

### 2 Materials and Methods

The investigated solution of ETICS has the following structure:

- skim "Klebocem", width 0.5 cm;
- SK insulating panel "Stiferite", width 4 cm;
- mechanical anchors in PVC, 2 per m<sup>2</sup>;
- primer "Klebocem";
- glass fiber mesh, width 0.3 cm;
- primer "Klebocem";
- colored top coat "Rivaton", width 0.2-0.3 cm.

The research has been carried out as a thermographic and photographic analysis on ten buildings in Naples, Italy – in Via Attila Sallustro - which have been built in 2012-2013. They are all buildings in reinforced concrete, consisting of seven floors and a total lateral surface, constituted by hollow bricks and ETICS, of 25000 m<sup>2</sup>. The device used for the thermographic survey was a thermographic camera IR FLIR 250T, and the output consisted in a total of sixty thermographic pictures, taken from the ground level, which show several relative differences in the superficial temperature, highlighting phenomena of detachment which could not, in most of the cases, be noticed by simple visual inspection. The individuation of the performance level of the various parts of the building followed the procedure suggested in ISO 15686-7 code.

Also, in accordance with the recommendations from UNI EN ISO 4628-1 code, it is necessary to define performance degrees as numbers from 1 to 5, detailed in Table 1, in order to attribute quantitative scores to each of the thermographic and photographic frames, which represent the in-use condition that they display.

Degree	Type of symptoms	In-use condition of the ETICS
1	No symptoms	No performance decay
2	Slight symptoms	Cracking and blistering phenomena on the surface (millimetrical size)
3	Medium symptoms	Macro-cracking and macro-blistering phenomena on the surface (centimetrical size)
4	Strong symptoms	Slight detachment of the panels
5	Totally unacceptable	Partial/total detachment of the panels

Table 1. Performance degrees for the in-use conditions of the ETICS.

The definition of the performance degrees displays two typologies of anomalies: the "slight symptoms" and the "medium symptoms" refer to the finishing layers, which have a basically protective performance and effect on the panels, while the "strong symptoms" and the "totally unacceptable" state are related to the panels themselves, and therefore have a much stronger significance in terms of performance decay of the ETICS.

In several cases, the thermographic frames show thermal gradients – caused by detachments - also in locations where no performance decay is visible by sight and by photographic frames, nor is related to an anomaly in the superficial layers, as acknowledged through tactile contact: this means that their origin has to be linked to an anomaly in the inner layers, presumably the panels themselves.

Figure 1 shows the distribution of the optical cones of the thermographic and photographic frames, numbered from 1 to 17; for each of them, 3-5 shots have been taken.

Figure 1. Distribution of the optical cones of the thermographic and photographic frames.

The photographic survey shows that the main typology of anomalies consist in crossshaped cracks in correspondence of some mechanical anchors, and in the form of horizontal lines, in correspondence of the contact between two adjacent panels, as shown in Figure 2.

Figure 2. Photographic frames: a) cross-shaped crack in correspondence of a mechanical anchor; b) line-shaped crack in correspondence of the contact between two adjacent panels.

Thermographic frames show color – corresponding to temperature – variations both in the shape of lines, which confirm the detachment revealed by the photographic information, and in the form of diffuse areas, as in Figure 3.

Figure 3. Thermographic frames: a) horizontal line at different temperature; b) diffuse thermal gradient on the surface.

### **3** Results and Discussion

A score between 1 and 5 was attributed to each of the photographic and thermographic frames, according to the typology and distribution of decay; the score of 5, corresponding to an unacceptable performance, was never attributed. Then, statistical analysis were performed on the sample, leading to the Gauss distribution shown in Figure 4.

Figure 4. Gauss distribution of the state of decay of the ETICS in the experimentation, measured in the performance degrees of Table 1.

The mean value of the performance decay is equal to 1.74, while the standard deviation is 1.28. The result seems coherent with the age of the sample buildings, and is strongly dependent on the output of the thermographic survey. In fact, as it was partially pointed out in the previous paragraphs, several areas did not present any visible – nor sensible - decay in the external layers, but the thermographic frames showed a thermal gradient, which had to be related to a detachment of the panels, signalling a more consistent state of decay.

In order to break down the obtained data, it was chosen to perform also separate analyses by dividing the output according to the cardinal direction of the façades. This led to four

different gauss distributions, respectively for the main cardinal directions of the building: E-NE, N-NW, W-SW and S-SE, reported in Figure 5.

Figure 5. Gauss distribution of the state of decay of the ETICS in the experimentation for each cardinal exposure, with the detail of mean value ( $\mu$ ) and standard deviation ( $\sigma$ ).

It can be noticed that, differentiating the analysis on the single façades, the results generally become more accurate: in 3 cases out of 4, the deviation is lower than in the analysis on the whole surface. Moreover, it emerges that values of higher decay correspond to the W-SW façade, while the other cardinal exposures have better performances. Since there is a higher frequency of detachment of panels, associated with higher performance degrees, this is also probably the reason behind the higher deviation.

The more negative value of performance decay in the W-SW direction seems particularly strong, reaching a ratio of 1.5-1.8 with the values in the other directions. Qualitatively, this phenomenon could be explained in relation to the less favorable conditions that insist on this façade, in particular solar exposure.

#### 4 Conclusions

As for many materials in the sector of building constructions, the large use of ETICS in the current building industry does not find its counterpart in a sufficient quantity of field experimentations, compared to the notable number of theoretical models and laboratory tests; considering the complexity of the factors that influence this aspect in relation to the context, it is certainly necessary to encourage a more frequent use of field experimentations to enrich the database concerning the states of decay.

The aim of the experimentation carried out in this work was not to try to produce a relation

between time and decay, as the collected data only refer to a single year, then it is not realistic to hypothesize a trend on its base, but rather the focus was on two significant aspects:

- the opportunities to make use of different tools and instruments for the monitoring activity, questioning their utility and the typology and level of information that they can provide;

- the qualitative differences that may exist in the decay of the same component, as a consequence of the variation of micro-contextual aspects.

The first point clearly refers to the use of the thermographic camera, and surely this case has provided a good proof of its peculiarities: incipient detachments between the panels could be noticed only thanks to the use of this instrument, allowing a much clearer picture of the state of decay; looking forward to the availability of quantitative data about the evolution of this anomaly, this is certainly an interesting information in the field of predictive maintenance.

At the same time, it has to be noticed that thermographic surveys do not show the dimension of the detachment, but only its existence; then, it is not possible to deduce the entity of the reduction of the thermal performance that the ETICS have to provide. So, an interesting development can be individuated in the possibility to link thermographic surveys to partially destructive tests, aimed to ascertain the dimension of the detachment, associate it to the output of the thermographic survey, and quantitatively determine its influence on the thermal performance of the ETICS.

Concerning the second aspect, the strong difference between the higher performance decay observed on one of the façades (W-SW) and the one on the others (E-NE, N-NW and S-SE) is certainly an interesting result, which is probably better not to refer yet to a single parameter, as the solar exposure might be, but rather to consider as an item of future interest, in the perspective of more detailed assessments of the weight of the micro-climatic factors that influence the durability of the single components. On this side, for future experimentations, it will be interesting to gather data from thermographic surveys on similar buildings in different geographic locations, in order to evaluate the entity of the differential performance degree with other climates. In this way, more light can be shed on the mechanism of the environmental influence on the performance of ETICS, and of buildings components in general.
