

Current Topics and Trends on Durability of Building Materials and Components

Carles Serrat, Joan Ramon Casas and Vicente Gibert (Eds.)

Current Topics and Trends on Durability of Building Materials and Components

Proceedings of the XV edition of the International Conference on Durability of Building Materials and Components (DBMC 2020)

Barcelona, Spain

20 – 23 October 2020

Edited by

Carles Serrat

Dept. of Mathematics

Joan Ramon Casas

Dept. of Civil and Environmental Engineering

Vicente Gibert

Dept. of Architectural Technology

Universitat Politècnica de Catalunya-BarcelonaTECH, Catalonia, Spain

A publication of:

**International Center for Numerical
Methods in Engineering (CIMNE)**

Barcelona, Spain

CIMNE 

Current Topics and Trends on Durability of Building Materials and Components

Carles Serrat, Joan Ramon Casas and Vicente Gibert (Eds.)

First edition, October 2020

TABLE OF CONTENTS

Preface.....	7
Acknowledgements.....	9
Organizers and Committees.....	11
Summary.....	17
Contents	19
Keynote	41
Special Sessions	51
Conference Topics Sessions	663
Authors Index.....	1949

ORGANIZING ASSOCIATIONS

American Society for Testing and Materials
(ASTM)

International Council for Research and
Innovation in Building Construction (CIB)

International Union of Testing and Research
Laboratories for Materials and Structures
(RILEM)

National Institute of Standards and Technology
(NIST)

National Research Council Canada (NRC-
CNRC)

ORGANIZERS AND COMMITTEES

ORGANIZING COMMITTEE

Carles Serrat i Piè

Chair

Department of Mathematics

EPSEB, Barcelona, Spain

Joan Ramon Casas i Rius

Department of Civil and Environmental Engineering

ETSECCPB, Barcelona, Spain

Vicente Gibert i Armengol

Department of Architectural Technology

ETSAB, Barcelona, Spain

STEERING COMMITTEE

Organizing Members

- Geert De Schutter, RILEM (Chair)
- Jennifer Keegan, ASTM
- Jorge De Brito, CIB
- Christopher C. White, NIST
- Michael Lacasse, NRC-CRC

Members at Large

- Robert Amor, The University of Auckland, New Zealand
- Carmen Andrade, CIMNE, Spain
- Christian Brischke, University of Göttingen, Germany
- Bruno Daniotti, Politecnico de Milano, Italy
- Vasco Peixoto De Freitas, FEUP, Portugal
- Peter Flüeler, m ETH/EMPA, Switzerland
- Dariusz Gawin, University of Lodz, Poland
- Julien Hans, CSTB, France
- Vanderley John, USP, Brazil
- Chun-Qing Li, RMIT University, Australia
- Isabel María Martínez, IETec-CSIC, Spain
- Hiroyuki Miyauchi, BRI, Japan
- Shiro Nakajima, Utsunomiya University, Japan
- Carles Serrat, Universitat Politècnica de Catalunya-BarcelonaTECH, Spain
- Kiang Hwee Tan, NUS, Singapore
- Nil Turkeri, ITU, Turkey

UPC INSTITUTIONAL COMMITTEE

- Francesc Torres (Chair), President of UPC-BarcelonaTECH
- Jordi Berenguer, Vice-rector for Knowledge Transfer and Innovation of UPC-BarcelonaTECH
- Inmaculada Rodríguez, Dean of Barcelona School of Building Construction (EPSEB)
- Pedro Díez, Dean of Barcelona School of Civil Engineering (ETSECCPB)
- Félix Solaguren-Beascoa, Dean of Barcelona School of Architecture (ETSAB)
- Albert Cuchi, Dean of Vallès School of Architecture (ETSAV)
- Eugenio Oñate, Chair of Executive Council of the International Center for Numerical Methods in Engineering (CIMNE)
- Carles Serrat, Chair of the DBMC 2020 Conference

SCIENTIFIC COMMITTEE

Chairs

- Joan Ramon Casas (Co-Chair), UPC-Barcelona TECH, Spain
- Carmen Andrade (Co-Chair), CIMNE, Spain

Vice-Chairs

- Antonio Aguado, UPC-Barcelona TECH, Spain
- Túlio Bittencourt, University of São Paulo, Brazil
- Nele De Belie, University of Ghent, Belgium
- Ravindra Gettu, IIT Madras, India
- Rade Hajdin, IMC GmbH, Zürich & Belgrade Univ.
- Michael Lacasse, NRC Construction Research Centre, Canada
- Fernanda Rodrigues, Universidade de Aveiro, Portugal
- Elisabetta Rosina, Politecnico di Milano, Italy
- Ana Silva, IST, Lisbon, Portugal
- Alfred Strauss, BOKU, Vienna, Austria

Members

- Bijan Adl-Zarrabi, Chalmers University of Technology, Sweden
- Mark Ahrens, University Bochum, Germany
- Ahu Aydogan, City College of New York, USA
- Diana Bajare, Riga Technical University, Latvia
- Véronique Baroghel-Bouny, IFSTTAR, France
- Pablo Daniel Benítez-Mongelós, National University of Itapúa, Paraguay
- Umberto Berardi, Ryerson University, Canada
- Susan A. Bernal, University of Leeds, Leeds, UK
- Hans Beushausen, UCT, South-Africa
- Tomasz Blaszczyński, Poznan University of Technology, Poland
- Violeta Bokan-Bosiljkov, U. Ljubljana, Slovenia
- Mark Bomberg, Syracuse University, NY, USA
- Alessandra Bonazza, CNR, Italy
- Anatolijs Borodinecs, Riga Technical University, Latvia
- Lars Boström, SP, Sweden
- Kathryn Bourke, Whole Life Ltd, Watford, UK
- Thomas Braml, Bundeswehr University Munich, Germany
- Christian Brischke, University of Goettingen, Germany
- Zeynep Basaran Bundur, Özyegin University, Istanbul, Turkey
- Stefan Burtscher, TU Wien, burtscher consulting GmbH, Austria
- Guido Camata, University G. D'Annunzio, Chieti Pescara, Italy
- Jan Carmeliet, ETH Zürich, Switzerland
- Diana Car-Pušić, University of Rijeka, Croatia
- Robby Caspeele, University of Ghent, Belgium
- Anna Cellmer, Koszalin University of Technology, Poland
- Michael Chew, National University of Singapore, Singapore
- Sheila M.A. Conejos, School of Science and Technology, Singapore University of Social Sciences, Singapore
- Anca Constantin, Ovidius University of Constanta, Romania
- Bart Craeye, University of Antwerp, Belgium
- Paulo Cruz, University of Minho, Portugal
- Meri Cvetkovska, Ss. Cyril and Methodius University in Skopje, Republic of Macedonia
- Martin Cyr, INSA Toulouse, France
- Bruno Daniotti, Politecnico di Milano, Italy
- Jorge De Brito, Instituto Superior Tecnico, Technical University of Lisbon, Portugal
- Gianmarco De Felice, Università degli Studi Roma Tre, Italy
- Vasco Peixoto De Freitas, U. Porto, Portugal
- Dominique Derome, EMPA, Switzerland

- Josée Duchesne, Université Laval, Quebec, Canada
- Vilma Ducman, Slovenian National Building and Civil Engineering Institute, Slovenia
- Miren Etxeberria, UPC-BarcelonaTECH, Spain
- Flora Faleschini, Università degli Studi di Padova, Italy
- Ines Flores-Colen, Instituto Superior Técnico, University of Lisbon, Portugal
- David Garcia, UPC-BarcelonaTECH, Spain
- Dariusz Gawin, Lodz University of Technology, Poland
- Hua Ge, Concordia University, Montreal, Canada
- Jennifer Gerbi, U.S. Department of Energy, USA
- Michel Ghosn, City College New York, USA
- José Manuel Gómez Soberón, UPC-BarcelonaTECH, Spain
- Klodian Gradeci, SINTEF Building and Infrastructure, Trondheim, Norway
- Elke Gruyaert, KU Leuven, Belgium
- Lars Gullbrekken, SINTEF Building and Infrastructure, Trondheim, Norway
- Guillaume Habert, ETH Zürich, Switzerland
- Carl-Eric Hagendoft, Chalmers University of Technology, Sweden
- Tomáš Hanák, Brno University of Technology, Czech Republic
- Michael Hansen, TU Hannover, Germany
- Laia Haurie, UPC-BarcelonaTECH, Spain
- Shuichi Hokoi, Kyoto University, Japan
- Vít Hromádka, Brno University of Technology, Czech Republic
- Aletheia Ida, University of Arizona, USA
- Simo Ilomets, Tallinn University of Technology, Estonia
- Kei-Ichi Imamoto, Tokyo University of Science, Japan
- Joanna Janicka, University of Warmia and Mazury in Olsztyn, Poland
- Hans Janssen, KU Leuven, Belgium
- Pär Johansson, Chalmers University of Technology, Göteborg, Sweden
- Harald Justnes, SINTEF, Norway
- Targo Kalamees, Tallinn University of Technology, Estonia
- Mohammad Arif Kamal, Aligarh Muslim University, India
- Janis Kaminskis, Riga Technical University, Latvia
- Amnon Katz, Technion, Haifa, Israel
- Jacek Katzer, Koszalin University of Technology, Poland
- Miroslav Komljenovic, University of Belgrade, Serbia
- Kinga Korniejenco, Cracow University of Technology, Poland
- Jana Korytářová, Brno University of Technology, Czech Republic
- Jarek Kurnitski, Tallinn University of Technology, Estonia
- Joao Labrincha, University of Aveiro, Portugal
- Roman Lackner, UIBK, Innsbruck, Austria
- Akos Lakatos, University of Debrecen, Hungary
- Paulo Laurenço, University of Minho, Portugal
- Elizabeth Laycock, Sheffield Hallam University, UK
- Agnieszka Lesniak, Cracow University of Technology, Poland
- Mae-Ling Lokko, Rensselaer Polytechnic Institute, USA
- Barbara Lothenbach, EMPA, Dübendorf, Switzerland
- Zoubir Lounis, National Research Council Canada, Canada
- Lyuben Lyubenov, University of Structural Engineering & Architecture, Bulgaria
- Ana Mandić Ivanković, University of Zagreb, Croatia
- Mihajlo Marković, University of Banja Luka, Bosnia and Herzegovina
- Ivan Marović, University of Rijeka, Croatia
- Isabel Milagre Martins, LNEC, Portugal
- Berardo Matalucci, SHoP Architects, USA
- Jose Matos, University of Minho, Portugal
- José António Raimundo Mendes da Silva, Universidade de Coimbra, Portugal
- Esperanza Menéndez Méndez, Institute of Construction Science Eduardo Torroja (CSIC), Spain
- José Filipe Miranda-Melo, University of Porto, Portugal
- Eva Møller, Technical University of Denmark

- Sergio Montelpare, University G. D'Annunzio, Chieti Pescara, Italy
- Travis Moore, National Research Council Canada, Ottawa, Canada
- Martin Morelli, Aalborg University, Copenhagen, Denmark
- Vahid Nik, Lund University, Sweden
- Maria Nogal, Delft University of Technology, the Netherlands
- Takafumi Noguchi, University of Tokyo, Japan
- Ehsan Noroozinejad, Graduate University of Advanced Technology, Iran
- Daniel Oliveira, University of Minho, Portugal
- Fernando Pacheco Torgal, University of Minho, Portugal
- Ainars Paeglitis, Riga Technical University, Latvia
- Cedric Patapy, Laboratoire Matériaux et Durabilité des Constructions – INSA Toulouse/UPS, France
- Marco Perino, Politecnico di Torino, Italy
- Ruut Peuhkuri, Aalborg University, Copenhagen, Denmark
- Edyta Plebankiewicz, Cracow University of Technology, Poland
- Gul Polat, Istanbul Technical University, Turkey
- Ioana Popescu, IHE Delft Institute for Water Education, the Netherlands
- Andres J. Prieto, Universidad Austral de Chile, Valdivia, Chile
- John Provis, University of Sheffield, UK
- Elzbieta Radziszewska-Zielina, Cracow University of Technology, Poland
- Laura Rampazzi, University of Insubria, Italy
- Nuno Ramos, FEUP, University of Porto, Portugal
- Jacek Rapinski, University of Warmia and Mazury in Olsztyn, Poland
- Marzieh Riahinezhad, National Research Council Canada, Ottawa, Canada
- Pere Roca, UPC-BarcelonaTECH, Spain
- Hugo Rodrigues, Polytechnic of Leiria, Portugal
- Staf Roels, KU Leuven, Belgium
- Petra Rütther, SINTEF Building and Infrastructure, Trondheim, Norway
- Hiroaki Saito, Ashikaga University, Japan
- Antonio Sansonetti, CNR, Italy
- Amaia Santamaría, Universidad del País Vasco, Bilbao, Spain
- Mats Santamouris, University of Athens, Greece
- Karma Sawyer, U.S. Department of Energy, USA
- Erik Schlangen, TU Delft, the Netherlands
- Lina Seduikyte, Kaunas University of Technologies, Lithuania
- Dmitrijs Serdjusks, Riga Technical University, Latvia
- Igal M. Shohet, Ben-Gurion University of Negev, Israel
- Carey Simonson, University of Saskatchewan, Canada
- Gintautas Skripkiunas, Vilnius Gediminas Technical University, Lithuania
- Mohamed Sonebi, Queens University, Belfast, UK
- Wil Srubar, University of Colorado Boulder, USA
- Sudip Talukdar, British Columbia Institute of Technology, Burnaby, Canada
- Kiang Hwee Tan, National University of Singapore, Singapore
- Luping Tang, Chalmers University of Technology, Sweden
- Fitsum Tariku, British Columbia Institute of Technology, Burnaby, Canada
- Nicola Tarque, Pontificia Universidad Católica del Perú, Perú
- Akos Torok, Budapest University of Technology and Economics, Hungary
- Milan Trivunic, University of Novi Sad, Serbia
- Nil Türkeri, Istanbul Techn Univ, Turkey
- Maria Rosa Valluzzi, University of Padova, Italy
- Joris Van Acker, UGent, Belgium
- Keith Van de Riet, University of Kansas, USA
- Nathan Van Den Bossche, Ghent University, Belgium
- Philip Van Den Heede, Ghent University, Belgium
- Humberto Varum, University of Porto, Porto, Portugal
- Marius Vendrell, University of Barcelona, Spain
- Anne Ventura, IFSTTAR, France
- Yury Villagran, LEMIT, La Plata, Argentina

- Martins Vilnitis, Riga Technical University, Latvia
- Eva Vitkova, Brno University of Technology, Czech Republic
- Jeroen Vrijders, Belgian Building Research Institute, Belgium
- Johan Vyncke, Belgian Building Research Institute, Belgium
- Lin Wang, Concordia University, Montreal, Canada
- John A. Wells, Crosier Kilgour and Partners Ltd., Winnipeg, Canada
- Guang Ye, TU Delft, the Netherlands
- Joan Lluís Zamora, UPC-BarcelonaTECH, Spain
- Mariano Angelo Zanini, Università degli Studi di Padova, Italy
- Cristina Zanotti, University of British Columbia, Canada
- John Zhai, University of Colorado Boulder, USA
- Xiaohai Zhou, EMPA, Switzerland
- Valentina Žileska-Pancovska, Ss. Cyril and Methodius University in Skopje, Republic of Macedonia

LOCAL ORGANIZING COMMITTEE

Chairs

- Vicente Gibert, UPC-BarcelonaTECH, Spain

Members

- Cindy Abbott-Brito
- Ronny S. Guarderas-Luna
- Laia Haurie, EPSEB
- Beatriz D. Médola
- Climent Molins, ETSECCPB
- Joan Moreno, ETSAB
- Ana-Belén Onecha, ETSAB
- Javier E. Peñuelas
- Verónica Royano
- Alejandra Valencia-Arboleda

SUMMARY

KEYNOTE

Keynote.....	41
---------------------	-----------

SPECIAL SESSIONS

Approaches to Hygrothermal Simulation for Assessing Durability Related to Climate Change	51
---	-----------

Organized by Travis Moore (NRC, Canada) and Michael Lacasse (NRC, Canada)

Biomimetic and Bioinspired Approaches for Enhanced Durability of Cementitious Materials	99
--	-----------

*Organized by Wil Srubar (University of Colorado Boulder, USA)
and Zeynep Basaran Bundur (Özyegin University, Istanbul, Turkey)*

Degradation of Coating Materials and its Relation to Durability of Structures	145
--	------------

*Organized by Takafumi Noguchi (University of Tokyo, Japan)
and Kei-ichi Imamoto (Tokyo University of Science, Japan)*

Durability and Field Tests of Thermal Insulating and Innovative Constructive Solutions	191
---	------------

*Organized by Ines Flores-Colen (IST, University of Lisbon, Portugal)
and Nuno Ramos (FEUP, University of Porto, Portugal)*

Durability and Performance of Building Envelopes	239
---	------------

*Organized by Klodian Gradeci (SINTEF Building and Infrastructure, Trondheim, Norway)
and Petra R  ther (SINTEF Building and Infrastructure, Trondheim, Norway)*

Durability Considering Climate Change and Natural Hazards	285
--	------------

Organized by Michael Lacasse (NRC, Canada) and Travis Moore (NRC, Canada)

Environmental Factors and Durability	341
---	------------

Organized by Tomasz Blaszczyński (Poznan University of Technology, Poland)

Life Cycle Costs in Construction Projects	389
--	------------

*Organized by Vít Hromádka (Brno University of Technology, Czech Republic)
and Edyta Plebankiewicz (Cracow University of Technology, Poland)*

Modern Sustainable Building Materials and Technologies	435
---	------------

Organized by Elzbieta Radziszewska-Zielina (Cracow University of Technology, Poland)

Performance Over Time of High-Performance Insulation and Reflective Building Envelope Materials	489
--	------------

Organized by Umberto Berardi (Ryerson University, Canada) and Marco Perino (Politecnico of Turin, Italy)

Remote Sensing of Building Condition	529
<i>Organized by Joanna Janicka (University of Warmia and Mazuri in Olsztyn, Poland)</i>	
<i>and Jacek Rapinski (University of Warmia and Mazuri in Olsztyn, Poland)</i>	
Slags in Cement-based Materials	567
<i>Organized by Flora Faleschini (Università degli Studi di Padova, Italy)</i>	
<i>and Amaia Santamaria (Universidad del País Vasco, Bilbao, Spain)</i>	
Soft Computing Tools and Sustainable Building Construction and Maintenance.....	615
<i>Organized by Diana Car-Pušić (University of Rijeka, Croatia)</i>	
<i>and Ivan Marovic (University of Rijeka, Croatia)</i>	

CONFERENCE TOPIC SESSIONS

Asset and Maintenance Management	663
<i>Organized by Ana Silva (IST, Lisbon, Portugal)</i>	
Building Pathology and Durability	771
<i>Organized by Túlio Bittencourt (University of São Paulo, Brazil)</i>	
Building Physics and Durability	899
<i>Organized by Antonio Aguado (UPC-BarcelonaTECH, Spain)</i>	
Durability Approach for Historical and Old Buildings	1149
<i>Organized by Elisabetta Rosina (Politecnico di Milano, Italy)</i>	
Durability of Materials, Systems and Components	1227
<i>Organized by Ravindra Gettu (IIT Madras, India)</i>	
IT / BIM and Durability	1665
<i>Organized by Rade Hajdin (IMC GmbH, Zürich & Belgrade Univ)</i>	
Large Sample Size Studies in Durability.....	1719
<i>Organized by Fernanda Rodrigues (Universidade de Aveiro, Portugal)</i>	
LCA, Sustainability and Durable Construction	1767
<i>Organized by Nele De Belie (University of Ghent, Belgium)</i>	
Service Life Prediction Methodologies	1869
<i>Organized by Alfred Strauss (BOKU, Vienna, Austria)</i>	

CONTENTS

KEYNOTE

Prescription of Maintenance Interventions by the New Generation of Eurocodes for Climate-Change Resilient Structures.....	41
<i>Maria Nogal</i>	

SPECIAL SESSIONS

Approaches to Hygrothermal Simulation for Assessing Durability Related to Climate Change

Organized by Travis Moore (NRC, Canada) and Michael Lacasse (NRC, Canada)

A Methodology for Assessment of Building Assembly Air Leakage Moisture Response, Condensation Risk, and Expected Durability When Subjected to Projected Future Climate Loads	51
---	-----------

David G. Kayll, Maurice Defo, Travis Moore and Michael A. Lacasse

Effect of Selected Moisture Reference Year on the Durability Assessment of Wall Assemblies under Future Climates.....	59
--	-----------

Sahar Sahyoun, Hua Ge, Chetan Aggarwal, Maurice Defo and Travis Moore

Freeze-Thaw Risk in Solid Masonry: Are ‘Hygrothermal Response Based’ Analyses Mandatory when Studying the Sensitivity of Building Envelopes to Climate Change?.....	67
--	-----------

Isabeau Vandemeulebroucke, Steven Caluwaerts and Nathan Van Den Bossche

Impact of Climate Change in Building Envelope Design: The Performance to Withstand Mould Growth.....	75
---	-----------

Klodian Gradeci, Alessandro Nocente, Nathalie Labonnote and Petra Rüther

The Future Climate Moisture Susceptibility of Wall Assemblies: Analysis Based on Monte Carlo Simulation Using a Simplified Deterministic Hygrothermal Simulation Model.....	83
--	-----------

Carl-Eric Hagendoft and Pär Johansson

Validation of Three Methods of Selecting Moisture Reference Years for Hygrothermal Simulations	91
---	-----------

Chetan Aggarwal, Maurice Defo, Travis Moore, Michael A. Lacasse, Sahar Sahyoun and Hua Ge

Biomimetic and Bioinspired Approaches for Enhanced Durability of Cementitious Materials

*Organized by Wil Srubar (University of Colorado Boulder, USA)
and Zeynep Basaran Bundur (Özyegin University, Istanbul, Turkey)*

Biodegradable Polymers on Cementitious Materials	99
---	-----------

*Julia García-González, Paulo C. Lemos, Alice S. Pereira, Julia M^a. Morán-del Pozo,
M. Ignacio Guerra-Romero, Andrés Juan-Valdés and Paulina Faria*

Biomimetic Antifreeze Polymers: A Natural Solution to Freeze-Thaw Damage in Cement and Concrete	105
<i>Mohammad Matar, Shane Frazier and Wil V. Srubar III</i>	
Compressive Strength Improvement and Water Permeability of Self-Healing Concrete Using Bacillus Subtilis Natto	113
<i>Nguyen Ngoc Tri Huynh, Kei-ichi Imamoto and Chizuru Kiyohara</i>	
Implication of Microbial Biofilm in the Biodeterioration of Cementitious Materials in the specific context of Anaerobic Digestion Conditions	121
<i>Cédric Perez, Christine Lors and Benjamin Erable</i>	
Integrating Self-Sensing in Self-Healing Concrete: Towards a Biomimetic Approach to Repair	129
<i>Kevin Paine, Bianca Reeksting, Hussameldin Taha and Susanne Gebhard</i>	
Two-Part Bio-Based Self-Healing Repair Agent for Cement-Based Mortar	137
<i>Mustafa Mert Tezer and Zeynep Başaran Bundur</i>	
 Degradation of Coating Materials and its Relation to Durability of Structures 	
<i>Organized by Takafumi Noguchi (University of Tokyo, Japan) and Kei-ichi Imamoto (Tokyo University of Science, Japan)</i>	
Analysis of Change of Physical Properties of Organic Repair Products due to Fire Exposition	145
<i>Esperanza Menéndez, Kei-ichi Imamoto, Ravindra Gettu, Takafumi Noguchi and Hairon Recino</i>	
Comparative Life-Cycle Analysis of Two Repair Measures for Chloride Contaminated Concrete Structures	153
<i>Sylvia Keßler</i>	
Deterioration Prediction Model of Multi-Layer Coating Material and its Reference Service Life Evaluation in Terms of Carbonation Control Effect	161
<i>Kotaro Etchuya, Kei-ichi Imamoto and Chizuru Kiyohara</i>	
Effects of Finishing Materials against Carbonation and Corrosion Condition of Model Building Exposed to Outdoor Conditions for 30 Years	169
<i>Koichi Matsuzawa, Osamu Senbu, Kei-ichi Imamoto, Chizuru Kiyohara, Kotaro Etchuya and Kaori Nemoto</i>	
Morphology Changes and Fillers migration in Urethane Composites during Thermal Degradation	177
<i>Atsuki Tanifuji, Takato Ishida and Ryoma Kitagaki</i>	
Study on a Proper Repair Cycle of Finishing Materials in Condominiums	183
<i>Tomotaka Ide, Hitoshi Hamasaki and Yuki Soga</i>	

Durability and Field Tests of Thermal Insulating and Innovative Constructive Solutions

*Organized by Ines Flores-Colen (IST, University of Lisbon, Portugal)
and Nuno Ramos (FEUP, University of Porto, Portugal)*

Assessing Water Resistance and Surface Properties of ETICS	191
<i>Giovanni Borsoi, João L. Parracha, Pedro Caiado, Inês Flores-Colen, Amélia Dionísio and Rosário Veiga</i>	
Development of an Integrated Durability Assessment Methodology of Thermal Mortars Applied in Multi-layer Systems	201
<i>Joana Maia, Nuno M.M. Ramos and Rosário Veiga</i>	
Evaluation of ETICS Characteristics that Affect Surface Mould Development.....	209
<i>João L. Parracha, Armand Cortay, Giovanni Borsoi, Rosário Veiga and Lina Nunes</i>	
In-Situ Tests on Silica Aerogel-Based Rendering Walls	217
<i>Inês Flores-Colen, Marco Pedroso, António Soares, Maria da Glória Gomes, Nuno M.M. Ramos, Joana Maia, Rui Sousa, Hipólito Sousa and Luís Silva</i>	
Laboratory Vs Field Performance of Innovative Thermal Insulating Plasters	223
<i>Stefano Fantucci, Elisa Fenoglio and Valentina Serra</i>	
Large Scale Laboratory and Field Tests of Aerogel Renders.....	231
<i>Jürgen Frick, Nayara R. M. Sakiyama, Marina Stipetic and Harald Garrecht</i>	

Durability and Performance of Building Envelopes

*Organized by Klodian Gradeci (SINTEF Building and Infrastructure, Trondheim, Norway)
and Petra Rüther (SINTEF Building and Infrastructure, Trondheim, Norway)*

Bio-Based Building Materials-How to Unravel the Role of Material Characteristics on Fungal Susceptibility?	239
<i>Liselotte C. De Ligne, Jan B.B. Van den Bulcke, Jan M. Baetens, Bernard De Baets and Joris C.M. Van Acker</i>	
Implementing a Framework for Qualitative Assessment of New Technical Solutions: A Case Study on CLT.....	247
<i>Charlotte Svensson Tengberg and Carl-Eric Hagentoft</i>	
Influence of Grid Presence in the Characteristics of Applied Mortars.....	255
<i>Isabel Torres, Inês F. Colen, Dora Silveira and Rafael T. Pinto</i>	
Influence of Lightweight Concrete Block Support on Physical and Mechanical Characteristics of Applied Mortars.....	263
<i>Dora Silveira, Isabel Torres, Inês F. Colen and Rafael T. Pinto</i>	
Performance and Durability of Adhesive Tapes for Building Applications. From Product Documentation to Scientific Knowledge (and Back Again)	269
<i>Malin Sletnes and Susanne Frank</i>	

Predominant Climate Exposure Strains - Thermal Degradation Testing Compared to Historical and Future Climate Scenarios	277
<i>Petra Rüther, Klodian Gradeci and Malin Sletnes</i>	

Durability Considering Climate Change and Natural Hazards

Organized by Michael Lacasse (NRC, Canada) and Travis Moore (NRC, Canada)

Assessment of Moisture Performance of National Building Code Canada Compliant Wall Assemblies under Climate Change	285
<i>Max Junginger, Maurice Defo, Travis Moore, Michael A. Lacasse and Vanderley M. John</i>	

Assessment of Moisture Response and Expected Durability of a Heritage Masonry Building Subjected to Projected Future Climate Loads of Ottawa, Canada	293
<i>John A. Wells, Michael A. Lacasse and Gary Sturgeon</i>	

Do We Need Hygrothermal Simulations to Evaluate the Design for Durability?	301
<i>Martin Morelli and Erik Brandt</i>	

Hygrothermal Performance Difference of Wooden Beam Embedded in an Internally Insulated Masonry Wall in 2D and 3D Models.....	309
<i>Xiaoha Zhou, Jan Carmeliet and Dominique Derome</i>	

Preventing Damage by Updating Moisture Control Standards	317
<i>Hartwig M. Künzle</i>	

The Impact of Climate Change on Material Degradation: Finding a Feasible Approach for Climate Model Evaluation	325
<i>Hamed Hedayatnia and Nathan Van Den Bossche</i>	

Various Factors of Water Entry and Penetration Through Water Proofing Layer in Wooden Wall Assembly	333
<i>Hiroaki Saito and Masashi Miyamura</i>	

Environmental Factors and Durability

Organized by Tomasz Blaszczyński (Poznan University of Technology, Poland)

A Probabilistic Model for the Evolution of Porous Structure Caused by Solid-Phase Precipitation/Dissolution within Building Materials	341
<i>Xiong Qing Xiang and Meftah Fekri</i>	

Assessment of Reasons behind and Level of Destruction of Aquatic Supports in a Hydraulic Ash Removal Bridge.....	349
<i>Tomasz Blaszczyński and Aldona Łowińska-Kluge</i>	

Grain size analysis of class C fly ash used for aluminium-silicate binders production.....	357
<i>Tomasz Blaszczyński and Maciej Król</i>	

Hygrothermal Regulation of Brick Masonry of Nanjing City Wall by Plants	365
<i>Changchang Xia, Zhenyi Kong, Shuichi Hokoi, Bo Ding, Tianwen Wang and Yonghui Li</i>	

Numerical Strategy to Simulate Seawater Ingress in RC Concrete Blocks Exposed to Wetting-Drying Cycles in Field Conditions During 19 years	373
<i>Anthony Soive, Véronique Baroghel-Bouny and Francis Lavergne</i>	

The Influence of Injection Agents Applied for Carrying out Secondary Horizontal Damp Proof Courses on Masonry Mortar Properties.....	381
<i>Tomasz Błaszczyński, Barbara Ksit and Bartłomiej Monczyński</i>	

Life Cycle Costs in Construction Projects

*Organized by Vít Hromádka (Brno University of Technology, Czech Republic)
and Edyta Plebankiewicz (Cracow University of Technology, Poland)*

Client's Expectations vs Contractor's Pricing. Fair Prices or Bid Rigging	389
<i>Hubert Anysz and Andrzej Foremny</i>	

Evaluation of Economic Efficiency of Territory Development.....	399
<i>Jana Korytářová, Vít Hromádka, Martin Marek, Svatopluk Pelčák and Jiří Rouzek</i>	

Evaluation of Socio-economic Impacts of Incidents on the Railway Infrastructure	407
<i>Vít Hromádka, Jana Korytářová, Eva Vítková, Tomáš Funk and Herber Seelmann</i>	

Identifying the Possibility of Using Unmanned Aerial Vehicles in the Process of Construction Projects Implementation.....	415
<i>Dariusz Skorupka, Artur Duchaczek, Agnieszka Waniewska, Magdalena Kowacka and Grzegorz Debita</i>	

Multiple-Criteria Cost Analysis for Simulated Life Cycle of Office Building	421
<i>Michał Krzemiński</i>	

Possibilities of Reducing Energy Costs in the Life Cycle of Office Buildings	427
<i>Edyta Plebankiewicz, Krzysztof Zima and Damian Wieczorek</i>	

Modern Sustainable Building Materials and Technologies

Organized by Elzbieta Radziszewska-Zielina (Cracow University of Technology, Poland)

Application of Pro-Ecological Building Technologies in Contemporary Architecture	435
<i>Jerzy Górski, Joanna Klimowicz and Anna Nowak</i>	

Fire Properties of Novel Cellulosic Material Modified with Expandable Graphite	443
<i>Anielkis S.R. Batista, Wojciech Ł. Grześkowiak and Bartłomiej Mazela</i>	

Fundamental Properties and Durability of Concrete with Gasification Molten Slag as Fine Aggregate.....	449
<i>Takafumi Watanabe, Hiromi Fujiwara, Masanori Maruoka and Koji Satori</i>	

Performance Based Specification of Wood - Project CLICKdesign	457
<i>Ed Suttie, Christian. Brischke, Eva Frühwald Hansson, Stefania Fortino, Jakub Sandak, Magdalena Kutnik, Gry Alfredsen, Christophe Lucas and Eric Vieillemand</i>	

Permeability of Ultra-Fine Reactive Fly Ash applied to Cement-Based Composites	465
<i>Wei-Ting Lin, An Cheng, Wei-Chung Yeh, Kinga Korniejeko, Marek Hebda and Michał Łach</i>	

Selecting Criteria for Assessing “Environmentally-Friendly” Material Options in Construction: Part I	473
<i>Robert Bucoń and Agata Czarnigowska</i>	

Selecting Criteria for Assessing “Environmentally-Friendly” Material Options in Construction: Part II	481
<i>Robert Bucoń and Agata Czarnigowska</i>	

Performance Over Time of High-Performance Insulation and Reflective Building Envelope Materials

*Organized by Umberto Berardi (Ryerson University, Canada)
and Marco Perino (Politecnico of Turin, Italy)*

Effects of Long-Term UV Exposure on the Performance of Cement Plasters Integrated with Thermochromic Paint and PCMs for Building Facade Applications	489
<i>Shahrazad Soudian, Umberto Berardi and Nadia O. Laschuk</i>	

Experiences from Interior Super Insulation of a Brick Wall from the 1800s	497
<i>Pär Johansson and Paula Wahlgren</i>	

Experimental Verification of the Theoretical Aging of Vacuum Insulated Panels	505
<i>Mahsa Nikafkar and Umberto Berardi</i>	

Failure Analysis of a Total Damage by Hail Impact of an External Thermal Insulation Composite Systems	513
<i>Silvain Michel, Peter Flüeler, Martin Jordi and Roger Welter</i>	

Quantifying Thermal Performance of the Building Envelope - Beyond Common Practice	521
<i>Simon Pallin, Jason W. DeGraw, Mahabir Bhandari and Tyler Pilet</i>	

Remote Sensing of Building Condition

*Organized by Joanna Janicka (University of Warmia and Mazuri in Olsztyn, Poland)
and Jacek Rapinski (University of Warmia and Mazuri in Olsztyn, Poland)*

A 3D Model for Building Condition Assessment	529
<i>Anna Banaszek, Sebast Banaszek, Anna Cellmer, Vicenç Gibert and Carles Serrat</i>	

Identification of Defects and Hazards in Structures Based on the Point Cloud Using the OptD Method	537
<i>Wioleta Błaszczak-Bąk and Joanna Janicka</i>	

Mobile Augmented Reality Application Supporting Building Facades Visualization	545
<i>Michał Bednarczyk and Tomasz Templin</i>	

Out-Of-Plane Displacements Determination Based on the Analysis of Point Clouds from TLS Using the M-Split Estimation.....	553
<i>Joanna Janicka, Jacek Rapiński, Wioleta Błaszczak-Bąk and Czesław Suchocki</i>	

Verification of Building Constructions Surroundings Based on Airborne Laser Scanning Data.....	559
<i>Maja Michałowska</i>	

Slags in Cement-based Materials

*Organized by Flora Faleschini (Università degli Studi di Padova, Italy)
and Amaia Santamaria (Universidad del País Vasco, Bilbao, Spain)*

Durability in Marine Environment of High-performance Concrete with Electric arc Furnace Slags and Cupola Slag Admixture	567
<i>Israel Sosa, Carlos Thomas, Juan Antonio Polanco, Jesús Setién and Pablo Tamayo</i>	

Durability Studies of Self-Compacting Concrete containing Electric ArcFurnace Slag Aggregate	575
<i>Amaia Santamaria, Marta Skaf, Vanesa Ortega-Lopez, Estiba Briz, José T. San José and Javier J. González</i>	

Durability Studies on Fiber-Reinforced Siderurgic Concrete	583
<i>Vanesa Ortega-López, Víctor Revilla-Cuesta, Amaia Santamaria, Ana B. Espinosa, José A. Fuente-Alonso and José A. Chica</i>	

Mechanical and Environmental Behavior of Cement Mortars Containing Ladle Furnace Slag	591
<i>Diego Aponte and Marilda Barra</i>	

Pore Refinement Action of GGBFS and Fly Ash on the Primary and Secondary Capillary Imbibition Rates of Concrete	599
<i>Natalia M. Alderete, Yury A. Villagrán-Zaccardi and Nele De Belie</i>	

Seismic Performance of RC Moment Frame Structures Made with EAF Slag Aggregates	607
<i>Flora Faleschini, Mariano A. Zanini and Klajdi Toska</i>	

Soft Computing Tools and Sustainable Building Construction and Maintenance

*Organized by Diana Car-Pušić (University of Rijeka, Croatia)
and Ivan Marovic (University of Rijeka, Croatia)*

Application of Soft Computing Methods to Increase Sustainability in Construction.....	615
<i>Silvana V. Petrusseva and Valentina K. Zileska Pancovska</i>	

Decision Support to Identification of Road Infrastructure Segments With Poor Conditions	623
<i>Niksa Jajac</i>	

Early Stage Construction Cost Prediction in Function of Project Sustainability	631
<i>Diana Car-Pusić and Marko Mladen</i>	
Possible Applications of Neural Networks in Managing Urban Road Networks.....	639
<i>Ivan Marovic</i>	
Uncertainty and Sensitivity Analyses for Evaluating the Building Element's Replacement in Building LCA	647
<i>Kyriaki Goulouti, Pierryves Padey, Alina Galimshina, Guillaume Habert and Sébastien Lasvaux</i>	
Use of Machine Learning in the Function of Sustainability of Wastewater Treatment Plants	655
<i>Goran Volf</i>	

CONFERENCE TOPIC SESSIONS

Asset and Maintenance Management

Organized by Ana Silva (IST, Lisbon, Portugal)

A Comprehensive Description of a Low-Cost Wireless Dynamic Real-Time Data Acquisition and Monitoring System.....	663
<i>Syedmilad Komarizadehasl, Behnam Mobaraki, Jose A. Lozano-Galant and Jose Turmo</i>	
A Framework for Installation Impact Analysis on Building Performance	669
<i>Jalaycia O. Hughes, Simon Pallin and Clayton Clark II</i>	
A Maintenance Management Model. Upgrading and Experimentation.....	677
<i>Maria Azzalin and Massimo Lauria</i>	
A Vector Scale of Severity of Damages in Buildings	685
<i>Félix Ruiz, Antonio Aguado and Carles Serrat</i>	
Assessing the Condition of Reinforced Concrete Bridge Using Visual Inspection Ratings.....	693
<i>Abdoul S. Bah, Thomas Sanchez, Yan Zhang, Kotaro Sasai, David Conciatori, Luc Chouinard, Gabriel J. Power and Nicola Zufferey</i>	
Condition-Based Maintenance Models for Stone Claddings	701
<i>Cláudia Ferreira, Ana Silva, Jorge de Brito and Luis C. Neves</i>	
Detection Sensitivity of Iron-Foil Corrosion Sensor in Simulated Concrete Solution.....	709
<i>Akira Eriguchi, Hiromi Fujiwara, Hayato Itaya, Toru Wakabayashi, Shunsuke Otani and Yukitoshi Isaka</i>	
Development of an Apparatus for Measuring the Load Acting on Joint Sealant when Movement Occurs	717
<i>Saori Ishihara, Hiroyuki Miyauchi, Akihiko Ito and Kyoji Tanaka</i>	
Financial Management of Construction Companies	723
<i>Jiří Kusák and Eva Vítková</i>	

Neural Model of Projecting Compressive Strength of Cement Concrete Intended for Airfield Pavements.....	731
<i>Małgorzata Linek</i>	

Platform Development for Drone Utilization in the Architectural Field	739
<i>Hiroyuki Miyauchi</i>	

Sustainability and Maintainability of High Rise Vertical Greenery Systems (VGS): its Lessons and Assessment Scoresheet	747
<i>Sheila Conejos and Michael Y.L. Chew</i>	

Synthetic Resin Reinforcement of Timber Joints Deteriorated by Termites.....	755
<i>Mikako Yamada, Masamitsu Sawada, Kei-ichi Imamoto, Chizuru Kiyohara and Akiko Ohtsuka</i>	

Use of Steel Fiber Reinforced Concrete for the Protection of Buildings Against High Dynamic Actions	763
<i>Vahan Zohrabyan, Thomas Braml, Tobias Zircher and Manfred Keuser</i>	

Building Pathology and Durability

Organized by T lio Bittencourt (University of S o Paulo, Brazil)

Airborne Algal Growth on the Roofs of Membrane-Structured Residences in a Cold Areas of Japan	771
<i>Makiko Nakajima, Daisuke Masueda, Shuichi Hokoi and Takayuki Matsushita</i>	

Analysis of the Degradation Condition of Elementary Schools.....	779
<i>S�nia Raposo</i>	

Comparative Study on (Non-)Destructive Techniques for On-Site Strength and Durability Assessment of Limestone Based Concrete Slabs	787
<i>Bart Craeye, Daan van Keijzerswaard and Patricia Kara De Maeijer</i>	

Concrete Durability Probed Using Compressive Strength, Chloride Penetration and Porosity Measurements on CEMII and CEMV Concretes Incorporating Mollusc Shell Spares in Artificial and Natural Seawaters	795
<i>Marine D. Georges, Amel. Bourguiba, Nassim. Sebaibi, Daniel. Chateigner and Mohamed. Boutouil</i>	

Development of a Damage Detecting Method for RC Slabs by Means of Machine Learning.....	803
<i>Yutaka Tanaka and Takahiro Nishida</i>	

Dynamic Observability Method for Durability Assessment Considering Measurement Noise.....	811
<i>Tian Peng, Joan R. Casas and Jose Turmo</i>	

Field Survey of Hygrothermal Behaviour within Wall Assembly Derived from Rain Penetration and Ventilation Performance of Exterior System.....	819
<i>Sadaharu Osamura and Hiroaki Saito</i>	

Global Inspection, Diagnosis and Repair System for Buildings: Homogenising the Classification of Repair Techniques.....	827
<i>Clara Pereira, Jorge de Brito and José D. Silvestre</i>	
Higher Incidence Pathologies in Installations of Solar Energy, Gas, Cooling, Heating and Ventilation.....	835
<i>Manuel J. Carretero-Ayuso</i>	
Hydronium Detection in Hardened Concrete	843
<i>Ana Martínez Ibernón, José M. Gandía Romero, Isabel Gasch and Manuel Valcuende</i>	
Implementation of an Embedded Sensor Based on Electrical Resistivity to Monitor Drying in Thick Concrete Structures	851
<i>Joanna Badr, Géraldine Villain, Jean-Paul Balayssac, Sérgio Palma Lopes, Yannick Fargier, Fabrice Deby and Sylvie Delepine-Lesoille</i>	
Macrocell Processes in Reinforced Concrete Structures.....	859
<i>Josep R. Lliso-Ferrando, José E. Ramón Zamora, Román Bataller and Juan Soto</i>	
Mechanical Behaviour of ETICS in Presence of Water	867
<i>Fulvio Re Cecconi, Giuseppe Cocchetti, Aram Cornaggia and Tomaso Villa</i>	
Observations of Moisture Damages in Historic and Modern Wooden Constructions.....	875
<i>Stephan Ott and Patrik Aondio</i>	
Pathologies of a Glass Building Envelope that Affect Durability and Comfort	883
<i>Susana Santamaria-Fernandez, Arritokieta Eizaguirre-Iribar and Xabier Olano-Azkune</i>	
Vinyl and Linoleum Floorings in Health Infrastructures: Maintenance Recommendations Based on Fieldwork Data.....	891
<i>Cláudia Carvalho, Jorge de Brito, Inês Flores-Colen and Clara Pereira</i>	

Building Physics and Durability

Organized by Antonio Aguado (UPC-BarcelonaTECH, Spain)

A New Alkali-Silica Reaction (ASR) Mitigation Technology - Part I: Comparing with Li, Ca, Al Salts, and Densified Silica Fume	899
<i>Frank Ong, Michae Myers, Thomas Vickers, Jacki Atienza, Lesley Ko and Paul Seiler</i>	
An Experimental Evaluation of the Thermal Performance of Felt Type Vegetated Facade System	907
<i>Elif Özer Yüksel and Nil Türkeri</i>	
An Experimental Study on the Thermal Conductivity of Concrete Containing Coal Bottom Ash Aggregate.....	915
<i>In-Hwan Yang, Jihun Park and Hoe-Won Jung</i>	
Behaviour of Surface Chloride Concentration in Concretes Subjected to Field Exposure in Marine Atmosphere Zone	921
<i>Gibson R. Meira, Pablo R. R Ferreira, Maria S. Freitas and Carmen Andrade</i>	

Carbonation Effect on the Chloride Profile	929
<i>Carmen Andrade</i>	
Detailed Modelling of the Masonry Unit-Mortar Interface Using Hygrothermal Simulation	937
<i>Michael Gutland, Scott Bucking and Mario Santana Quintero</i>	
Drying Potential of Wood Frame Walls Subjected to Accidental Water Infiltration	945
<i>Marijke Steeman, Nathan Van Den Bossche and Klaas Calle</i>	
Durability Evaluation of Hemp Fibers and Recycled Aggregates Concrete	953
<i>Samer Ghosn and Bilal Hamad</i>	
Effect of Crack Repair by Bio-Based Materials Using Alginate and Bacillus Subtilis under Wet and Dry Environment Part-II	961
<i>Takahi Nishida, Keiyu Kawaai and Atsushi Saito</i>	
Effect of Vapor Diffusion Port on Drying of Wood-Frame Walls	967
<i>Ben Zegen Reich, Hua Ge and Jieying Wang</i>	
Evaluation of Pore Structure of Hardened Cement Paste Immersed in Sodium Sulfate Solution	975
<i>H.Nicolás Otsuka Sakata, Kennosuke Sato and Shigehiko Saito</i>	
Evaluation of Tortuosity in Cemented Sand Using X-Ray Computed Microtomography	983
<i>Junil Pae and Juhyuk Moon</i>	
Examination of Optimum Construction Area for Appropriate Thickness in Polyurethane Waterproofing Construction	991
<i>Yuji Hosshin, Saori Ishihara and Kyoji Tanaka</i>	
Field Study on Hydrophobised Internally Insulated Masonry Walls	999
<i>Evy Vereecken, Daan Deckers, Hans Janssen and Staf Roels</i>	
Hempcrete Buildings: Environmental Sustainability and Durability of Two Case-studies in North and South Italy	1007
<i>Giovanni Dotelli, Chiara Moletti, Patrizia Aversa, Sergio Sabbadini, Anna Marzo, Concetta Tripepi, Pasqua Lauriola and Vincenza A.M. Luprano</i>	
Improving Frost Durability Prediction based on Relationship between Pore Structure and Water Absorption	1015
<i>Mohamed A. Aldabibi, Michelle R. Nokken and Hua Ge</i>	
Intrinsic Differences on the Photodegradation Mechanisms between Pigmented and Non-Pigmented Coatings Determined by Multi-Scale Analysis	1023
<i>Takato Ishida, Ryoma Kitagaki, Hideaki Hagihara and Yogara Elakneswaran</i>	
Ionic Diffusivity and Pore Structure of Hardened Cement Paste Exposed to High Temperature Environment for Long Period	1031
<i>Isao Kurashige</i>	

Monitoring Durability of Limestone Cement Paste Stored at Conditions Promoting Thaumasite Formation	1039
<i>Konstantinos Sotiriadis, Michal Hlobil, Jaromír Toušek, Dita Machová, Petra Mácová, Michal Vopálenský and Albert Viani</i>	
Non-Destructive Evaluation of Micro-Cracked SCC by Ultrasonic Waves	1047
<i>Irene Palomar, Gonzalo Barluenga, Hugo Varela, Javier Puentes and Ángel Rodríguez</i>	
On Bio-Deterioration of Solar Reflective Materials: An Innovative Experimental Procedure to Accelerate the Ageing Process of Surfaces.....	1055
<i>Giulia Santunione, Chiara Ferrari, Alberto Muscio and Elisabetta Sgarbi</i>	
Post Peak Behavior of Carbonated Concrete Structure - A Case Study of the Former Shime Mining Office Vertical Derrick in Japan	1063
<i>Kaiting Su, Kei-ichi Imamoto, Takafumi Noguchi, Manabu Kanematsu , Hitoshi Hamasaki, Kohji Teranishi, Chizuru Kiyohara and Munenori Yamada</i>	
Proven Performance: Aged TPO Field Study	1071
<i>Jennifer Keegan, Thomas J. Taylor and James R. Kirby</i>	
Rainwater Management of Ventilated Facades: Impact of Joint Width and Cavity Size	1079
<i>Stéphanie Van Linden and Nathan Van Den Bossche</i>	
Salt and Ice Crystallization Resistance of Lime Mortars with Natural Lightweight Aggregate.....	1087
<i>Martin Vyšvařil and Patrik Bayer</i>	
Self-Compacting Concrete with Recycled Concrete Aggregate: Resistance against Aggressive External Agents	1095
<i>Victor Revilla-Cuesta, Marta Skaf, Aratz García-Llona, Ignacio Piñero, Juan M. Manso and Vanesa Ortega-López</i>	
Statistical Analysis of Sulfate Attack Resistance of Reactive Powder Concrete	1103
<i>Umut Bektimirova, Eldar Sharafutdinov, Chang S. Shon, Dichuan Zhang and Jong R. Kim</i>	
Study on the Practical Use of Urea to Reduce Drying Shrinkage of Concrete by Spraying Urea Solution under Cold Environment	1111
<i>Takumi Sato, Hiromi Fujiwara, Masanori Maruoka and Liu Lingling</i>	
The Durability of Plant-Based Air Filtering Systems in Buildings: From an Air Quality and Energy Reduction Perspective	1119
<i>Ahu Aydogan</i>	
Thermodynamic Processes in Nanostructured Thermocoatings	1127
<i>David Bozsaky</i>	
Towards the Determination of Chloride Profiles by means of Resistivity Measurements in Reinforced Concrete.....	1135
<i>Géraldine Villain, Marie A. Alhaji, Sérgio Palma Lopes and Véronique Bouteiller</i>	

Understanding the Reactivity of Dicalcium Silicate by Density Functional Theory ...1143
Seungchan Kim, Juhyuk Moon and Johann Plank

Durability Approach for Historical and Old Buildings

Organized by Elisabetta Rosina (Politecnico di Milano, Italy)

Durability of Internally Insulated Historical Solid Masonry Under Future Climates: A Stochastic Approach.....1149
Sahar Sahyoun, Lin Wang, Hua Ge, Maurice Defo and Michael A. Lacasse

Earth Construction Durability: In-Service Deterioration of Compressed and Stabilized Earth Block (CSEB) Housing in Algeria1157
Adel Benidir, M'hamed Mahdad and Ahmed Brara

Effect of Mortar Age on the Textile-to-Mortar Bond Behavior1165
Ali Dalalbashi, Bahman Ghiassi and Daniel V. Oliveira

Electro-Desalination of Sandstones With Cracks1173
Lisbeth M. Ottosen

Freeze-Thaw Deicing salt Attack on Concrete: Towards Engineering Modelling1181
Charlotte Thiel, Vadym Lomakovych and Christoph Gehlen

FRP Reinforcement for Concrete Frame Buildings at Mexico City Around 1900 to 19601189
Juan M. García Garduño, Perla R. Santa Ana Lozada and Lucia G. Santa Ana Lozada

Properties of Czech WW2 Concrete Fortifications after 80 Years1197
Ondřej Holčapek, Pavel Reiterman and Jiří Pazderka

Stability Assessment of Historic Plaster Ceilings on Wood Lath.....1203
Helena M. Currie, Matthew B. Bronski and Rachel M. Lynde

The Stone Masonry Contribution in Greek Industrial Buildings' Typology and Construction Durability (Late 19th to Early 20th Century)1211
Georgia G. Cheirchanteri

The Structural Strengthening of a Masonry Heritage Shop House using Glass Fibre Based Materials1219
Kribanandan Gurusamy Naidu

Durability of Materials, Systems and Components

Organized by Ravindra Gettu (IIT Madras, India)

Analysis of Steel Bars in Corrosion Process after 70 Years of Natural Aging.....1227
Francieli Schmoeller, Maryangela G. Lima and Silvelene A. Silva

Analysis of the Variation of Thermal Conductivity of Rigid Polyisocyanurate Foam (PIR) in The Context of Aging1235
Tomas Makaveckas, Raimondas Bliūdžius and Aurelija Levinskytė

Are Mineral Toppings of Asphalt Roofing Sufficient to Protect Flat Roofs and Roofing Felt Alone?	1243
<i>Tomasz Szkuta and Maria Wesolowska</i>	
Behavior of Mortars with Different Porosities in Front of Attack of Aggressive Agents	1251
<i>Alessandra M. Weber, Wellington Mazer, Daniela E. Pedroso and Cleber Pedroso</i>	
Behavior of Waterproofing Systems Exposed to Environmental Agents	1257
<i>Julie A. Braun, Flávio L. Maranhão and Renata Monte</i>	
Carbonation Behavior of Powdered Cement-Based Materials Under Different Relative Humidities and CO₂ Concentrations	1265
<i>Kiyofumi Nakada, Katsuhito Komiya, Hikaru Fumino, Yuhei Nishio, Manabu Kanematsu and Takafumi Noguchi</i>	
Case Study of Pathological Manifestations of Neoprene Support Devices in Infrastructure	1273
<i>Felipe R. Gonçalves, Lais A. Alves, Assed N. Haddad and Elaine G. Vazquez</i>	
Characteristics of the Changes in the Compressive and Tensile Stress of the Construction Sealant under Cyclic Movement.....	1281
<i>Kohei Yamashita, Hiroyuki Miyauchi, Akihiko Ito, Tomomi Soeta and Tohru Nakashima</i>	
Composite Façade Elements with Self-Cleaning Surface made of UltraHigh-Performance Concrete (UHPC).....	1289
<i>Julia von Werder, Patrick Fontana, Johannes Hoppe, Serdar Bilgin and Birgit Meng</i>	
Concrete: Limit States and Sustainability	1297
<i>Kristýna Hrabová, Břetislav Teplý and Tomáš Vymazal</i>	
Deformation Velocity Survey in Mortar and Cement Paste Specimens Subjected to External Aggressive Attacks	1305
<i>Cristina Tedeschi and Elsa Garavaglia</i>	
Deterioration of CLT under Humid and Dry Cyclic Climate	1313
<i>Shiro Nakajima, Yoshihei Sakabe, Seiya Kimoto and Yoshinori Ohashi</i>	
Determination of the Deterioration Characteristics of Facade Materials: A Case Study.....	1321
<i>Nil Kokulu</i>	
Durability Assessment of GFRP Rebars Exposed to High pH-Seawater.....	1329
<i>Alvaro Ruiz Emparanza, Carlos N. Morales, Juan Manuel Palacios, Francisco De Caso and Antonio Nanni</i>	
Durability Assessment of Gypsum Boards with Glass Mat Reinforcement Used in Light Facade Systems	1337
<i>Mauricio M. Resende, Douglas C. Meirelles, Gustavo R. Boriolo and Luciana A. Oliveira</i>	
Durability of FRP Immersed in Water. Changes in Mechanical Properties.....	1345
<i>Ernest Bernat-Maso, Manuel J. Lis, Luis E. Mercedes and Lluís Gil</i>	

Durability Studies of Polyurethane-Based Structural Adhesives Used in Engineered Wood Products in New Zealand.....	1353
<i>Catherine L. Nicholson</i>	
Effect of Carbonation in Mortars with Different Types of Metakaolin and Curing Procedures.....	1361
<i>Helena Carasek, Mônica E. Jungblut, Paulo M. Passos and Oswaldo Cascudo</i>	
Effect of Cement Type and Micro-cracks on Chloride Penetration in Concrete	1369
<i>Nicoletta Russo, Matteo Gastaldi, Luca Schiavi, Alberto Strini, Riccardo Zanoni and Federica Lollini</i>	
Effect of Coexisting Materials on Secondary Ettringite Formation.....	1377
<i>Kennosuke Sato, Tsuyoshi Saito and Tatsuhiko Saeki</i>	
Effect of Crack Repair by Bio-Based Materials Using Alginate and Bacillus Subtilis under Wet and Dry Environment Part-I.....	1385
<i>Keiyu Kawaai, Takahiro Nishida and Atsushi Saito</i>	
Effect of Internal Hydrophobization on the Properties of Porous, Cementitious Materials	1393
<i>Kalina B. Grabowska and Marcin Koniorczyk</i>	
Effect of the Type of Concrete with Mineral Additions on the Reinforcement Corrosion Induced by Chlorides - Analysis in the Same Mechanical Strength Class	1401
<i>Andrielli Moraes de Oliveira, Oswaldo Cascudo and Alexandre de Castro</i>	
Evaluation of the Effects of Environmental Exposure on the Performance Decay of ETICS.....	1409
<i>Maurizio Nicoletta, Roberto Landolfi and Alessio Pino</i>	
Experimental Study on Carbonation Resistance and Water Absorbing Property of Concrete Crack with repair	1417
<i>Naoko Tsuchiya and Kaori Nemoto</i>	
Gold Leaf Murano Glass Piastras' Performance in the Trencadís Catalan Modernism Mosaic: Recognition of Primary Alteration Patterns	1425
<i>Héctor Y. Orozco Camargo and Joan Ll. Zamora i Mestre</i>	
How to Determine when a New Building Product is Suitable - Certifications and Experience	1433
<i>Ernst J. de Place Hansen, ørgen Nielsen, Eva B. Møller and Ruut H. Peuhkuri</i>	
Impact of Portland Cement Content on Alkali Activated Bottom Ash	1441
<i>Luis Tambara Júnior, Malik Cheriaf and Janaide C. Rocha</i>	
Influence of Different Types of Metakaolin on Compressive Strength and Chloride Migration of Concrete.....	1449
<i>Rodrigo Teodoro, Helena Carasek and Oswaldo Cascudo</i>	
Influence of Drying on Accelerated Carbonation Testing of Concrete	1457
<i>Jean Louis Gallias, Bruno Fiorio, Yunyun Tong and Mehdi Benaissa</i>	

Influence of Fly Ash on Strength Development of Concrete and its Temperature Dependence.....	1465
<i>Hiromi Yanokura, Isao Kurashige, Naoyuki Sugihashi, Keiichi Takahashi and Yasuhiro Kuroda</i>	
Influence of Surface Treatment of Fresh Concrete on its Resistance to Drying Shrinkage.....	1473
<i>Pavel Reiterman and Vendula Davidová</i>	
Influence of the Particle Size Distribution of Natural Sands in the Accelerated Alkali-Silica Expansion Test (AMBT)	1479
<i>Patricia E. Vila and Maria N. Pereyra</i>	
Innovative Approaches to Increase Service Life of Poplar Lightweight Hardwood Construction Products	1487
<i>Joris C.R. Van Acker, Xiuping Jiang and Jan B.B. Van de Bulcke</i>	
Innovative Environment-Friendly Interior Finishing Technologies Resistant to Mold Growth.....	1495
<i>Piotr Czernski, Elżbieta Radziszewska-Zielina, Wojciech Ł. Grześkowiak, Patrycja Kwaśniewska-Sip and Paweł Krzyściak</i>	
Long-term Performance of Repairs to Reinforced Concrete Exposed to Coastal Conditions.....	1503
<i>Sachie Sato, Yoshihiro Masuda and Masaru Kakegawa</i>	
Measurement of Moisture Content and Volume Change Distribution Inside Cement Paste Specimens Using X-Ray CT Imaging	1511
<i>Takayuki Fumoto, Masaru Abuku and Stephen A. Hall</i>	
Microstructural Evaluation of Durability of Different Cementitious Mixtures in Microbial Induced Corrosion Environments	1519
<i>Chunyu Qiao and David Rothstein</i>	
Monitoring the Early-Age Shrinkage Cracking of Concrete with Superabsorbent Polymers by Means of Optical Fiber (SOFO) Sensors.....	1527
<i>José R. Tenório Filho, Didier Snoeck and Nele De Belie</i>	
On the Effects of Relative Humidity and CO₂ Concentration on Carbonation of Cement Pastes	1535
<i>Quoc Tri Phung, Anna Varzina, Janez Perko, Diederik Jacques, Nobert Maes and Özlem Cizer</i>	
OSB and Marine Plywood: Performance Comparison for use with Light Steel Frame Walls in Brazil.....	1545
<i>Max Junginger, Mauricio M. Resende, Luciana A. Oliveira and Vanderley M. John</i>	
Performance of European Wood Species in Above Ground Situations After 10 Years of Weathering: Evidence of a Positive Impact of Proper Design	1553
<i>Magdalena Kutnik, Martine Gabillé and Mathilde Montibus</i>	

Performance of Fibre-Reinforced Slag-Based Alkali Activated Mortar in Acidic Environment	1561
<i>Priyadharshini Perumal, Tirthankar Paul, Tero Luukkonen, Juha Rönning, Paivo Kinnunen and Mirja Illikainen</i>	
Preconditioning of Specimens - Drying Influence on Alkali-Activated and Geopolymer Mortar	1569
<i>Vincent Trincal, Virginie Benavent, Hugo Lahalle, Gabriel Samson, Cédric Patapy, Yoann Jainin and Martin Cyr</i>	
Prolonging the Durability and Conservation of Historic Materials by Microclimatic Monitoring in the Archaeological Areas	1577
<i>Elisabetta Rosina and Alessandra Pili</i>	
Residual Strength and Durability of Glass Fiber FRCM and CRM Systems Aged in Alkaline Environments	1585
<i>Valeria Rizzo, Francesco Micelli, Marianovella Leone, Antonio Bonati and Maria Antonietta Aiello</i>	
Resistivity Measurements to Assess the Freeze - Thaw Attack on Concrete - Lab Specimen and Real Structure.....	1593
<i>Frank Spörel</i>	
Restoration of Historic Windows: Methodology and Case Studies.....	1601
<i>Edward A. Gerns and Sarah K. Van Domelen</i>	
Smalti Murano Glass Tessella's Applied Outdoor in the Trencadís Catalan Modernism Mosaic: Recognition of Preliminary Alteration Patterns	1609
<i>Raül Serra i Fabregà, Joan Ll. Zamora i Mestre and Paloma Arias</i>	
Study of Autogenous Self-Healing in Different Mortar Formulations	1617
<i>Nohelia Gutiérrez, Laia Haurie, Antonia Navarro and Joan Ramon Rosell</i>	
Sulfate Resistance of Blended Cements (Limestone Illite Calcined Clay) Exposed Without Previous Curing.....	1625
<i>Agustín Rossetti, Tai Ikumi , Igancio Segura and Edgardo F. Irassar</i>	
Testing Joints of Air and Vapour Barriers, Do We Use Relevant Testing Methods? ...	1633
<i>Eva B. Møller and Torben V. Rasmussen</i>	
The Efficiency of Fly Ash Concrete in the Context of the Combined Action between Chlorides and Carbonation.....	1641
<i>Raphaelle Malheiro, Gustavo Camacho, Gibson R. Meira and Aires Camões</i>	
The Palace of Westminster Courtyards Project: Sourcing Stone for Repair and Conservation	1649
<i>Elizabeth Anne Laycock, David Jefferson and Steven Hetherington</i>	
Transport of Moisture and Chlorides into Sprayed Concrete	1657
<i>Diego Aponte, Marilda Barra, Susanna Valls and Lucia Fernandez</i>	

IT / BIM and Durability

Organized by Rade Hajdin (IMC GmbH, Zürich & Belgrade Univ)

Building Circular Economy: a Case Study Designed and Built Following a BIM-Based Life Cycle Assessment Approach	1665
<i>Mauro Manca, Zuzana Prochazkova, Umberto Berardi, Licini Alfaro and Felipe Pich-Aguilera</i>	
Development of 3D Printing Technology for Geopolymers.....	1673
<i>Kinga Korniejenko, Michał Łach, Janusz Mikula, Maria Hebdowska-Krupa, Dariusz Mierzwiński, Szymon Gądek and Marek Hebda</i>	
Environmental Monitoring System Based on Low-Cost Sensors.....	1679
<i>Behnam Mobaraki, Seyedmilad Komarizadehasl, Francisco J. Castilla Pascual and Jose A. Lozano-Galant</i>	
Integration of Durability Data of Construction Elements Within a BIM-Based Environment.....	1687
<i>Leticia Ortega, Begoña Serrano, Isaac Villanova and Andrea R. Ilies</i>	
Maintenance-Oriented Design in Architecture. A Decision Support System for the Evaluation of Maintenance Scenarios Through Bayesian Networks Use. A Case Study: the Headquarters of ING Groupe in Amsterdam	1695
<i>Michele Di Sivo, Daniela Ladiana, Federico Novi and Caterina Salvatori</i>	
Metamodel Development for Predicting Hygrothermal Performance of Wood-Frame Wall under Rain Leakage.....	1703
<i>Lin Wang, Hua Ge and Liangzhu (Leon) Wang</i>	
Practical Application of Low-Cost Sensors for Static Tests	1711
<i>Seyedmilad Komarizadehasl, Behnam Mobaraki, Jose A. Lozano-Galant and Jose Turmo</i>	

Large Sample Size Studies in Durability

Organized by Fernanda Rodrigues (Universidade de Aveiro, Portugal)

A Nonparametric Statistical Model for the Selection of Significant Variables Acting in the Deterioration of Built Façades.....	1719
<i>Carles Serrat, Vicenç Gibert, Joan R. Casas and Jacek Rapiński</i>	
Degradation of Concrete Structures from the Climate Change Perspective.....	1727
<i>Pablo Benítez, Fernanda Rodrigues, Sudip Talukdar and Sergio Gavilán</i>	
Relationships between Outside and Interior Appearance Inspection and Actual Bio-Deterioration of Structural Members in Existing Wood Houses	1735
<i>Takahiro Tsuchimoto, Satoshi Takahashi, Hideaki Sumikura and Takafumi Nakagawa</i>	
State of Maintenance in Relation to Property Regime, Tenancy and Uses of a Large Sample of Residential Buildings Located in the Most Vulnerable Areas of the City of Barcelona	1743
<i>Sara Vima-Grau, Còssima Cornadó and Pilar Garcia-Almirall</i>	

Statistical Analysis on Belgian Building Defects	1751
<i>Jasmijn De Vos, Anke Blommaert and Nathan Van Den Bossche</i>	
Strategies to Support Facility Management Resourcing Building Information Modelling	1759
<i>Raquel V. Matos, Fernanda Rodrigues, Hugo F. Rodrigues and Aníbal G. Costa</i>	
LCA, Sustainability and Durable Construction	
<i>Organized by Nele De Belie (University of Ghent, Belgium)</i>	
Assessment of Building Resistance to Accidental Actions in the Social Aspect of Sustainable Construction	1767
<i>Aleksandra Radziejowska and Anna Sobotka</i>	
Behaviors of Concrete with Recycled Clay Brick as Fine Aggregate	1775
<i>Wencui Yang, Xiaoping Cai and Duo jie Jiangjiu</i>	
Durability of Mortars Packaged with Production Waste of Autoclaved Aerated Concrete	1781
<i>Maurizio Nicoletta, Claudio Scognamiglio and Federica Vitale</i>	
Effect of Supplementary Cementitious Material and Fine Recycled Aggregates on Shrinkage Properties of Self-Compacting Microconcrete	1789
<i>Miren Etxeberria and B.T. Purandhar Reddy</i>	
Identification of the Influence of Concrete Cover Thickness and Ø/p Parameter on Crack Spacing.	1797
<i>Chavin N. Naotunna, S.M Samindi M.K Samarakoon and Kjell T. Fosså</i>	
Influence of High Volume Fly Ash and Recycled Aggregates in Chloride and Carbonation Resistance of Concrete	1805
<i>Miren Etxeberria and Fernando Alvarez</i>	
Modernization of Housing Estates Towards Sustainable Development: What do Housing Estate Managers Provide, What do the Users See?	1813
<i>Anna Ostańska</i>	
Quality Evaluation of Granulated Blast Furnace Slag Sand Via Acid Immersion and Freeze-Thaw Tests.....	1821
<i>Takaya Kawato and Isao Kurashige</i>	
Risk-Based Approach for Improving Concrete Bridges' Inspection Planning	1829
<i>Sindre Tronsli , Samindi M. Samarakoon and R.M Chandima Ratnayake</i>	
Structural Reliability of Bridges Made with EAF Concretes	1837
<i>Mariano A. Zanini</i>	
Study on Technical Standards of Reinforced Concrete Structures with Long Service Life when Using Blended Cement and Finishing Materials	1845
<i>Tadatsugu Kage, Hiroyuki Tanano, Naoko Tsuchiya and Hirosh Jinnai</i>	

The Business Case for Re-Usable Buildings - Business Models, Systems Diagnosis and Case for Action	1853
<i>Kathryn P. Bourke and Katherine T. Adams</i>	

Viability of Production and Application of Concrete with Addition of Fibers of Polyethylene Terephthalate (PET) Bottles for Construction	1861
<i>Edson Rodrigues</i>	

Service Life Prediction Methodologies

Organized by Alfred Strauss (BOKU, Vienna, Austria)

A Joint Inversion Approach of Capacitive and Resistive Measurements for the Estimation of Water Saturation Profiles in Concrete Structures	1869
<i>Marie A. Alhajj, Sébastien Bourguignon, Sérgio Palma Lopes and Géraldine Villain</i>	

A Risk-Based Approach for Quantifying Durability and Life-Expectancy of the Wall-Foundation Construction Detail in Timber Buildings	1877
<i>Andrea Gaspari, Ivan Giongo and Maurizio Piazza</i>	

A Spatially Continuous Driving Rain Map of India at 0.5°×0.5° Gridded Scale	1885
<i>Sneha Das and Kaustav Sarkar</i>	

Development of a Service Life Database of Building Elements Based on an International Data Collection	1893
<i>Kyriaki Goulouti, Morgane Giorgi, Didier Favre and Sébastien Lasvaux</i>	

Durability Based Service Life Estimation for Chloride Exposed Cracked and Self-Healed Concrete	1901
<i>Nele De Belie, Bjorn Van Belleghem, Sylvia Keßler, Philip Van den Heede and Kim Van Tittelboom</i>	

Environmental Deterioration Factors in Metal Claddings and GFRC Panels Implemented on Facades: An Assessment through Two Cases in Istanbul	1909
<i>Sahar Manafvand Ardi, Begum Diker and Payam Kanani Bahri</i>	

Methodology for Predicting the Service Life of Two-Ply Roofing-Felt Membrane	1917
<i>Erik Brandt and Martin Morelli</i>	

Probabilistic Approach to the Service Life Prediction of Timber Claddings	1925

Abstract. *The building sector is responsible for the introduction of about 40% of the waste in the environment (60 Mtons per year in Italy), with serious consequences for our future. Therefore, the statistics of the last few years have induced many researchers and many companies to investigate more sustainable products and technologies. Among these strategies, the re-use of waste materials has been widely encouraged. Many solutions have been proposed in the field of mortars for which the use of waste products such as ceramic materials, polystyrene, clay, concrete, has been tried out. The results have often been encouraging, especially for masonry mortars. Nevertheless, very few attempts have been made to place this type of products on the market. Moreover, the “younger” building materials such as Autoclaved Aerated Concrete have not been fully investigated in their potential use as recycled aggregates. The goal of this research was to evaluate the characteristics of mortars packaged with different percentages of production waste of Autoclaved Aerated Concrete components as aggregates, in order to assess the possible use of these conglomerates as masonry mortars or as plasters. The first campaign included tests for determining mechanical resistance, density, capillary water absorption, adherence to substrate, resistance to carbonation. The tested mortars had satisfactory mechanical characteristics and generally exhibited a good capacity to withstand the actions of atmospheric agents. Finally, the results highlighted the direct connection between Autoclaved Aerated Concrete percentage and mechanical and durability properties.*

Keywords: *Building Materials Production Waste, Carbonation, Lightweight Aggregates, Recycled Conglomerates, Sustainability.*

1 Introduction

The reuse of building waste materials in sustainable concretes or mortars has raised over the last years due to the environmental impact of building constructions. Building materials production waste is preferred rather than Construction and Demolition one due to its controlled chemical composition. The replacement of ordinary aggregates with production waste ones generally affects the mechanical performances of concretes or mortars owing to the low density of recycled aggregates (de Brito *et al.*, 2005; Ćosić *et al.*, 2015).

Nepomuceno, Isidoro and Catarino (2018) suggested a 30% threshold value of volume-replacement percentage of natural coarse aggregate with recycled ceramic in case of structural concrete. Actually, an increase of porosity and of average pore diameter is observed when the recycled aggregates are used (Anastasiou *et al.*, 2018; Dang *et al.*, 2019). The accretion of

macropores and the reduction of micropores increases the resistance to external sulphate attack as a consequence of the lower capillary pores transport phenomena (Coppola *et al.*, 2018). Moreover, the porosity improves the thermal insulation performances of mortars (Khan, 2002; Mendes *et al.*, 2019).

Despite the raising interest on recycled lightweight aggregates, it is presently unclear whether the high porous structure of the recycled conglomerates affects their durability due to the microstructural changes induced by the aggregates. In particular, the relation between recycled mortars morphology and their carbonation resistance has not been fully investigated.

In order to analyze the effects of the use of a production waste lightweight material on the physical, the mechanical and the resistance to carbonation properties of conglomerates, five groups of mortars packaged with an increasing percentage by mass of Autoclaved Aerated Concrete (AAC) recycled aggregates were tested and compared. The changes in density, porosity, water adsorption, mechanical strengths and carbonation depths were measured.

The results of this study may be used to define the threshold of AAC aggregate percentage with the respect to the application of conglomerate as masonry mortars or as renderings and plasters.

2 Materials and Methods

2.1 Materials

The tested mortars were packaged with natural hydraulic lime (NHL 5 according to UNI EN 459-1:2010 standard) supplied by TSCcalce.

A natural siliceous sand and a recycled Autoclaved Aerated Concrete were used as aggregates. The natural sand was provided by Bacchi s.p.a and its apparent density, stated by the manufacturer, was 1460 kg/m^3 . The recycled aggregate was supplied by Bacchi s.p.a, resulted from the production waste of Autoclaved Aerated Concrete (AAC) wall components. The particles size distribution of the recycled aggregate was measured through the dry sieving method according to UNI EN 933-1: 2012 and it is shown in Figure 1.

Figure 1. Particle size distribution of Autoclaved Aerated Concrete recycled aggregates according to the sieving test method.

The particle density and the water adsorption of AAC aggregates were analyzed according to UNI EN 1097-6:2013 pycnometer method for aggregate particles passing 4 mm test sieve and retained on the 0,063 mm test sieve. The outcomes are shown in Table 1.

Table 1. Particle density and water adsorption of Autoclaved Aerated Concrete recycled aggregates.

M1 (g)	M2 (g)	M3 (g)	M4 (g)	ρ_{rd} (kg/m ³)	ρ_{ssd} (kg/m ³)	ρ_a (kg/m ³)	W (%)
77,93	477,73	452,29	45,11	860	1480	2290	72,76

M1, saturated and surface dried mass in air; M2, mass of pycnometer containing the saturated aggregate sample and the water; M3, mass of pycnometer filled with water only; ρ_{rd} , oven dried particle density; ρ_{ssd} , saturated and surface dried particle density; ρ_a , apparent particle density; W, water adsorption.

The chemical composition of the recycled aggregates was determined by a ThermoGravimetric Analysis (TGA) using a Netzsch- STA 409 PC Luxx apparatus. The mass losses of an AAC aggregate sample of 20 mg were monitored over time as the sample was heated in a controlled atmosphere. The temperature ranged from 23° to 1200° with a 10°/min heating rate. The mineralogical composition of AAC aggregates was analyzed by X-ray Diffraction (XRD) technique using a Philips X'pert PRO multipurpose powder diffractometer with X-ray wavelength of 1,54 Å. The outcomes were compared with the standard patterns of the International Centre for Diffraction Data database. The main mineralogical phases were Silicon Oxide, Calcium Carbonate, Calcium Hydroxide Hydrated Silicates and Calcium Sulfate Hydrated. A distilled water was used as kneading water.

Five groups of mortars with five specimens in each group were analyzed. All the tested specimens were packaged using the hydraulic lime and a binder-aggregate ratio of 1:3 by mass. The first group – noted 1 - was taken as reference and it was composed of mortars with 100% natural aggregate percentage. In the other four groups – noted 2,3,4,5 - the natural sand was gradually replaced with an increasing percentage by mass of recycled aggregate from 12,5% to 50%. The water – binder ratio of 2,3,4,5 was adjusted due to AAC aggregate water adsorption. Table 2 shows the compositions of the tested mortars.

Table 2. Compositions of tested mortars.

	HL (g)	SS (g)	AAC (g)	W (g)	W/B	RA (%)
1	450	1350	0	225	0,50	0
2	450	1181,25	168,75	337,5	0,75	12,5
3	450	1012,50	337,50	450	1,00	25
4	450	843,75	506,25	562,5	1,25	37,5
5	450	675	675	675	1,50	50

HL, hydraulic lime; SS, siliceous sand; AAC, Autoclaved Aerated Concrete recycled aggregates; W, kneading water; W/B, water/binder ratio; RA, AAC percentage by mass on the total aggregates.

2.2 Methods

2.2.1 Mixing procedure of mortars and testing program of physical, mechanical and resistance to carbonation properties

Physical, mechanical and resistance to carbonation tests were performed on prismatic specimens according to UNI EN 196-1:1996 specifications. The natural sand and the recycled

aggregates were dry premixed before they were blended with the hydraulic lime and the kneading water. The specimens were molded in prismatic casts (40x40x160 mm) and cured in a climatic chamber (MSL Humichamber EC 125) under controlled conditions according to UNI EN 1015-11:2007. Three specimens of each group were tested for density, porosity, water adsorption, compressive and flexural strength, two specimens of each group were tested for resistance to carbonation.

2.2.2 Apparent and bulk dry densities, open porosity and water adsorption

The tests were conducted according to UNI EN 1936:2007 specifications. The prismatic specimens were dried in an oven at $70\pm5^\circ$ temperature until a constant mass was recorded.

As the mass was stabilized, the three specimens of each group were weighted and their dry mass M_1 was recorded. Then the dry specimens were stored for 24h under vacuum in a vessel in which the pressure was gradually lowered to 15 ± 5 mmHg. After this period a volume of water was introduced in the vessel so that the specimens were immersed for at least 5 mm. The specimens were kept under vacuum and immersed in water for 24h with the same pressure of 15 ± 5 mmHg. Finally, the pressure was returned to the atmospheric value and the specimens were left immersed for other 24h. After the 72h storage the immersed specimens were weighted and the M_2 value was recorded. The mortars were then wiped with a cloth and the mass of the saturated specimens, noted M_3 , was measured.

The apparent (ρ_a) and the bulk (ρ_r) densities, the open porosity (p) and the water adsorption (W) were finally calculated using the UNI EN 1936:2007 equations.

2.3 Mechanical Properties

The compressive and the flexural resistance tests were performed according to UNI EN 1015-11:2007 procedure using the Alpha Technologies Tensometer 2020 machine. The compressive load cells were of three types: groups 3,4,5 were tested with 5kN, group 2 with 10kN and group 1 with 15kN. The flexural load cells were 5kN for groups 4,5 and 10kN for groups 1,2,3.

2.3.1 Adherence on substrates test

The adhesive strength of mortars on substrates was measured according to UNI EN 1015-12:2016 procedures. Three different substrates - brick, tuff and lapil-cement - were tested and their fracture patterns were compared.

2.3.2 Resistance to carbonation

The resistance to carbonation test and the analysis of the results were conducted according to UNI EN 13295:2005 indications. The carbonation depth was measured according to UNI EN 14630:2003 procedures. The measurement was repeated only two times - on 15th and on 30th day- because all the specimens were fully carbonated after thirty days.

3 Results

3.1 Apparent and Bulk Dry Densities, Open Porosity and Water Adsorption

The apparent and the bulk dry densities, the open porosity and the water adsorption of the tested

mortars are shown in Table 3. The mean values for the three specimens of each group are reported. The reference mortar -1- exhibited an apparent density 66% higher than the group 5.

The open porosity and the water adsorption of group 5 were respectively twice and three times as high as group 1.

Table 3. Apparent and bulk dry densities, open porosity and water adsorption. Mean values of the three specimens of each group are reported.

	ρ_a (g/cm ³)	ρ_r (g/cm ³)	p (%)	W (%)
1	1,75	2,24	22	12,58
2	1,51	2,13	29	19,35
3	1,27	1,95	35	27,12
4	1,20	1,91	37	31,07
5	1,05	1,87	44	41,53

ρ_a , apparent dry density; ρ_r , bulk dry density; p , open porosity; W , water adsorption

3.2 Mechanical Properties

The mean values of flexural and compressive strength are reported in Table 4. The flexural resistance of group 4 was tested only on two specimens due to the breakage of one sample during the curing period. The group 5 exhibited a flexural and a compressive resistance fifteen and ten times, respectively, as low as mortars of group 1.

Table 4. Flexural and compressive strength. Mean values of the three specimens of each group* are reported.

	σ_f (MPa)	σ_c (MPa)
1	2,62	6,93
2	1,54	4,53
3	0,67	1,49
4	0,13	0,90
5	0,17	0,57

* Except for flexural resistance of group 4 (mean values of two specimens); σ_f , flexural resistance; σ_c , compressive resistance.

The compressive strength values were compared to UNI EN 998-2:2016 and to UNI EN 998-1:2016 specifications with respect to the classes of masonry and rendering or plastering mortars, respectively. The classification of the tested mortars is reported in Table 5.

3.3 Adherence on Substrates Test

The adhesive strength of mortars on each of the tested substrates is shown in Table 6. Mean values of recorded resistance are reported along with UNI EN 1015-12:2016 fracture pattern classification. The A, B, C pattern types referred to an adhesion fracture at the interface between mortar and substrate, to a cohesion fracture in the mortar itself and to a cohesion fracture in the substrate material, respectively.

Table 5. Classification of the tested mortars according to UNI EN 998-1,2:2016.

	UNI EN 998-2	UNI EN 998-1

5	/	CS I	GP-LW-CR-OC-T

/ not classified; GP general purpose; LW lightweight rendering/plastering; CR coloured rendering mortar; OC one coat rendering mortar for external use; R renovation mortar; T thermal insulation mortar

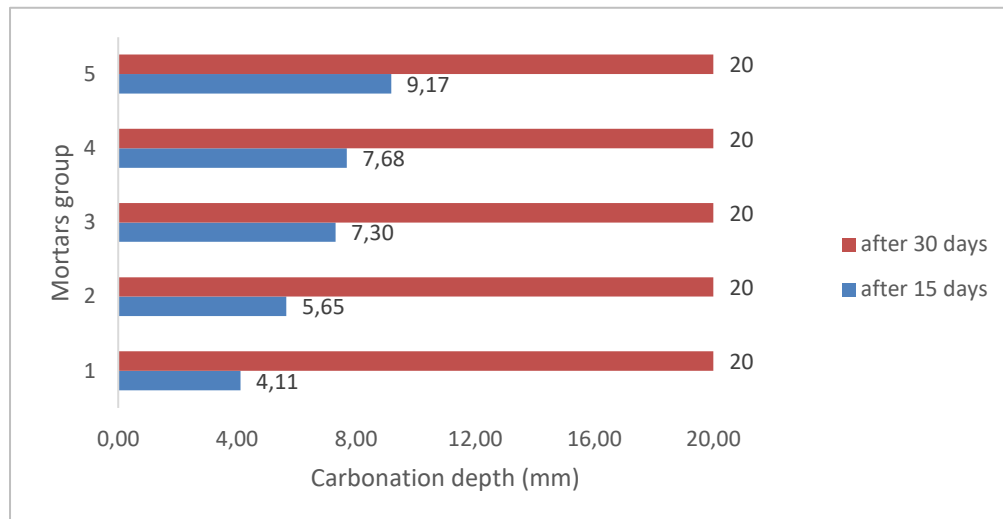

Table 6. Adhesive strength on substrates. Mean values of resistance and fracture pattern type are reported.

	Brick		Tuff		Lapil-cement	
	f_u (MPa)	FP	f_u (MPa)	FP	f_u (MPa)	FP
1	0,24	A	0,29	B/C	0,56	A
2	0,34	A	0,34	B/C	0,26	B
3	0,30	B	0,04	B/C	0,14	B
4	0,16	B	0,05	A	0,12	B
5	/	/	/	/	0,09	B

f_u , adhesive strength; FP, fracture pattern; / it was not possible to measure the strength

3.4 Resistance to Carbonation

The results of the resistance to carbonation test are shown in Figure 2. On the 15th day the group five was carbonated twice as high as the reference mortar whereas all the specimens were fully carbonated on the 30th day.

**Figure 2.** Resistance to carbonation test. Carbonation depth on 15th and 30th day are reported.

4 Discussions and Conclusions

The aim of the research was to investigate the influence of Autoclaved Aerated Concrete waste production aggregates on the mechanical and the durability properties of mortars, with specific respect to the resistance to carbonation. Results indicate that the replacement of the ordinary siliceous sand with AAC aggregate impacts on the hard-state properties of mortars.

The density and the mechanical properties – compressive and flexural strengths – and the adhesive strength to substrates decreased as the recycled aggregate percentage grew. Concerning the adhesive strength to substrate, the adherence to tuff rapidly lowered as the sand was replaced with AAC. Moreover, the open porosity and the water adsorption increased as AAC replaced the natural sand. Actually, the mortars with a higher percentage of AAC needed more kneading water due to the AAC adsorptive properties. Finally, the highest AAC mortar exhibited a short-term low resistance to carbonation, whereas the same value of carbonation depth was observed on 30th day measurement for all the specimens.

Similar trends were reported by Blanco *et al.* (2000) who recorded a strong correlation between the use of lightweight aggregates and the physical and the mechanical properties of concretes. Moreover, the discussed results are consistent with Zhao *et al.* (2015) who measured the reduction of flexural and compressive strength of concretes due to the use of recycled aggregates. Tewar *et al.* (2017) also investigated the substitution of natural sand with AAC waste production aggregates and they reported the growing of kneading water mass and the lowering of compressive strength as AAC percentage was kept higher. Finally, the higher porosity of recycled-aggregates conglomerates was found responsible for a higher CO₂ uptake, similar to Evangelista *et al.*, (2010); de Oliveira Andrade *et al.*, (2018).

However, the tested mortars were packaged with only one type of binder and one particle sizes distribution of aggregates, mainly ranged between 2 and 4 mm. Therefore, further studies are necessary to find if the type of binder and the packing of aggregates can modify the discussed results. The resistance to carbonation test needs to be repeated with a shorter time interval between the measures in order to better evaluate the evolution of the phenomenon. Finally, a mechanical test on the carbonated specimens has to be executed to investigate the effects of CO₂ diffusion on the compressive and the flexural strength of the mortars.

In conclusions, the substitution of natural sand with AAC aggregates seems to be useful to package both masonry and rendering or plastering mortars. Moreover, the increased porosity and the reduced density of higher AAC percentage mortars suggest their potential thermal insulating properties. Conversely, a threshold for AAC percentage is necessary for masonry mortars packaged with hydraulic lime due to the reduction of mechanical performances and resistance to carbonation.
